REPAIR MANUAL

Nikon | NIKON CORPORATION
Tokyo, Japan

SPECIFICATION

SPECIFICATION

(Specifications and mechanisms not described in instruction manual and catalogues are described here).

1. Outline

This camera offers the thorough automatization, small-size, light-weight, easy operation and low price to accord the general user's needs, and to spread widely as Nikon's most well-sold model.

2. Feature

(1) Substantiality of the automatized functions by the Five-Point AF with Multi-CAM900 Auto-Focus Module and the auto pop-up of the Built-in speed light.
(2) Light-weighted by making the parts by plastic and minimaturization.
(3) Easy operation by the exposure mode dial and the command dial.
(4) The useful functions as the diopter adjustment, AF assistant illuminance, AF-A mode and remote control.
(5) The functions as the AF area selection, pre-view, multiple exposures and bracketing.
(6) The finder of which finder field is bright (Employed the newly developed clear mat and the hollow pentagon.)

3. Viewfinder

Type	Hollow Pentagonal Type Single Lens Reflex Finder
Finder Screen	B-type Clear Mat Screen V
Finder Replacement	Unavailable
Screen Replacement	Unavailable
Finder Visuality Ratio	Approx. 89% both vertically and horizontally
Magnification	0.675 times at $-1.52m^{-1}$ (dpt) 0.604 times at $+0.77m^{-1}$ (dpt) (50mm lens is used. ∞)
Diopter	-1.52 to $+0.77m^{-1}$ (dpt) Can be adjusted by the diopter adjustment lever. 4-step adjustment. The optional eyepiece correction lenses can be used together.
Eye Point	15.9mm (at $-1.52m^{-1}$ (dpt)) 23.1mm (at $+0.77m^{-1}$ (dpt)) 17.05mm (at $-1m^{-1}$ (dpt))
Eyepiece frame	Rectangular Shape (F-401 type, new-type eyepiece rubber is equipped.)
Eyepiece Lens	3 elements in 3 groups (Material: plycarbonate, polyolefine, acrylic)

4. Shutter

① Electronically controlled vertical-travel focal-plane shutter
② Max. Shutter Speed : 1/2000, At Synchronous Second 1/90
③ Curtain Speed : Approx. 8.4msec (24mm Image plane)
④ Traveling Direction : Vertical-travel (Up)
⑤ The Number of Blade: Front curtain 5 elements Rear curtain 4 elements
⑥ Material of Blade : Aluminum Blade and Plastic Blade are used together
⑦ Control Speed Range : 30sec. to 1/2000sec., Time (M mode only)

5. Metering

① System : TTL full-aperture exposure metering system by the IC integrated type six-segments sensor
② Control System : With D-type Nikkor Lens: 3D six-segment Matrix Metering
Without D-type Nikkor Lens: Six-segment Matrix Metering
When the exposure mode is M: Center-Weighted Metering
③ Metering Range : EV1 to 20 (ISO 100, when using F1.4 lens)
④ AE Lock : No lock

6. Auto Flash

① System : TTL-BL Fill-Flash by the IC integrated type sensor
② Range : Built-in speedlight: GN2.8 to 12 (ISO 100 m)
External speedlight: GN2.8 to (ISO 100 m)
③ ISO Interlocking Range : ISO 25 to 800 (Built-in/ External in common)
④ Built-in Speedlight Auto Flash System :
Exposure Mode P, S, A, AUTO, Image program : TTL-BL
Exposure Mode M: TTL
⑤ Full Output Warning : Ready-light in the finder blinks. (For 3 to 4 sec.)

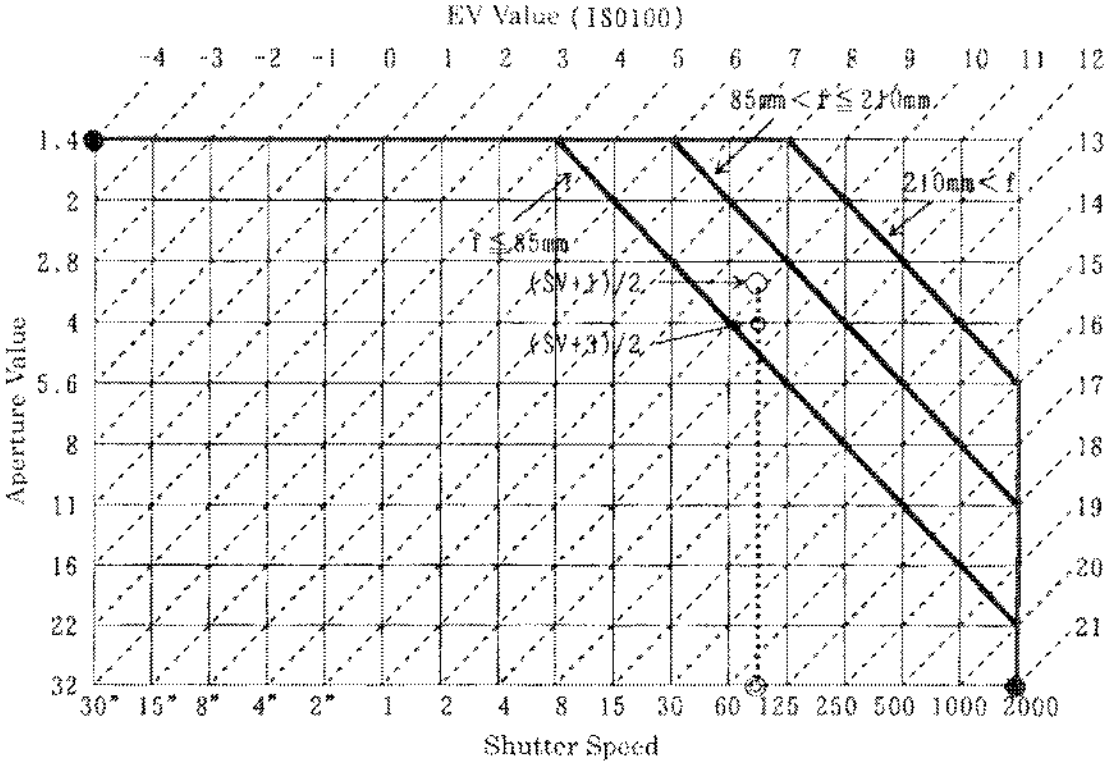
7. External Speedlight

① Communication : Serial communication is available.
② Group : F70 group (But, except the Matrix Balanced Fill-Flash function)
③ Unusable Functions with External Speed light : None
④ Usable Mode : Exposure Mode S, A: All modes
Exposure Mode M: TTL, Non TTL Auto Flash, Manual Mode
Exposure Mode P, AUTO, Image Program: TTL-BL, TTL

10. Program Diagram

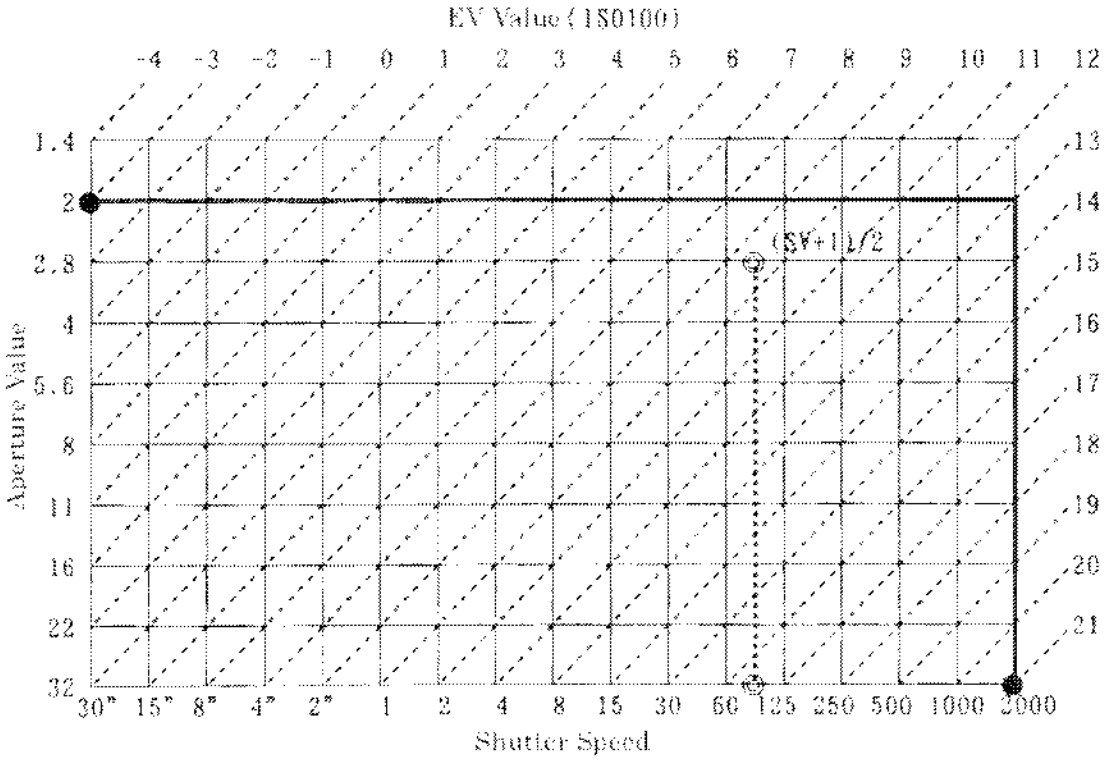
●——● When not using the speed light　　○·····○ When using the built-in speed light
●·····○ When using the external speed light

(1) Auto-Multi Program Mode (P) and AUTO Mode (AUTO)

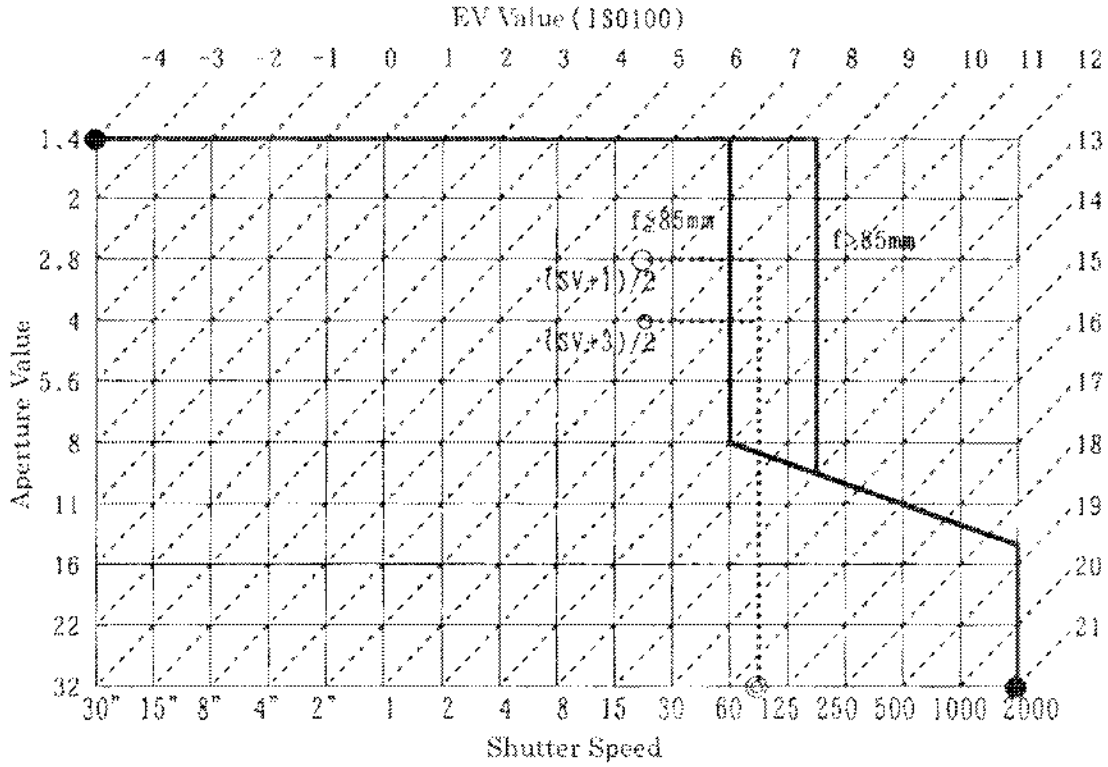


In the control diagram., the limit of the control aperture value at the aperture side is mentioned 1.4, but on the control, the aperture value is available up to 1.0 and the limit is not made. (Since no lens of which aperture value is more than 1.4 can be controlled, the aperture value more than 1.4 is not mentioned in the diagram.)

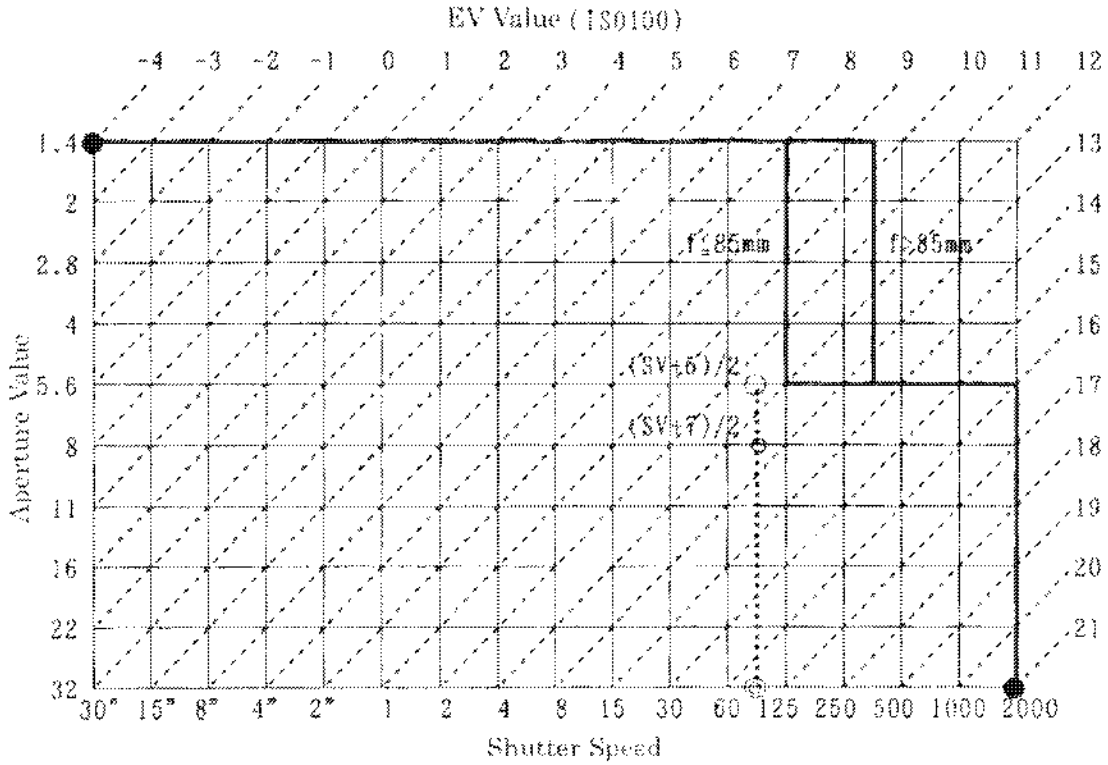
(2) Portrait Mode (🌷)



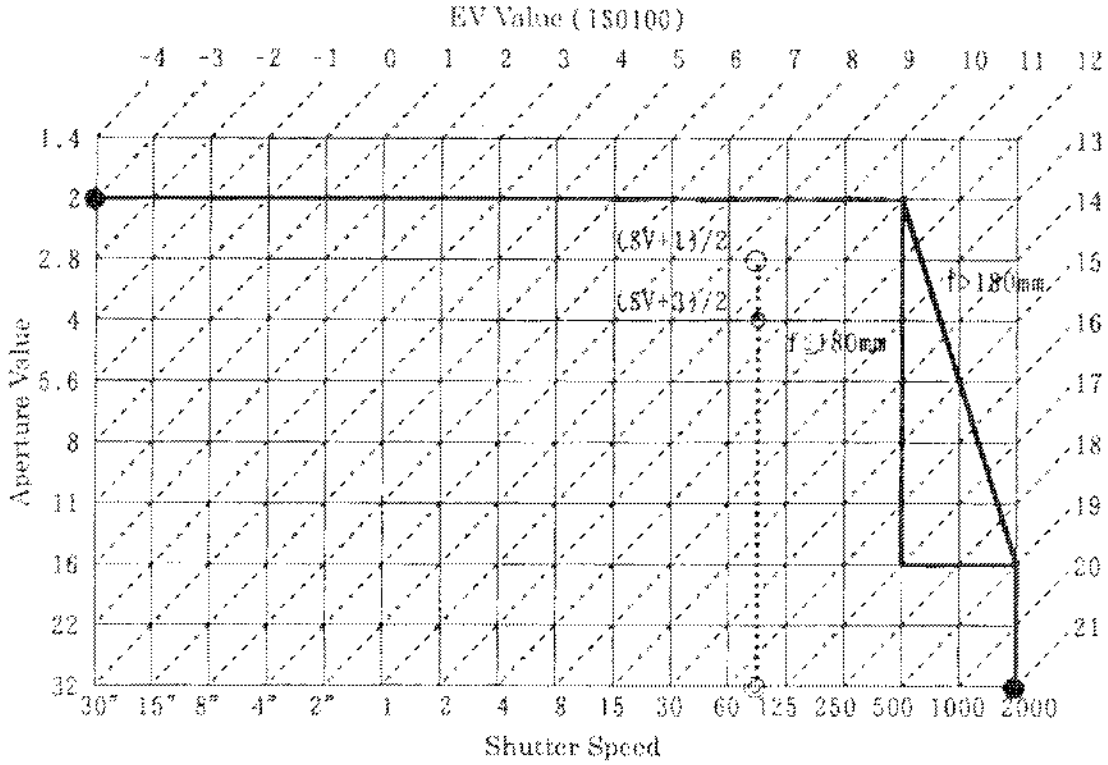
〔3〕 Landscape Mode (🏞)



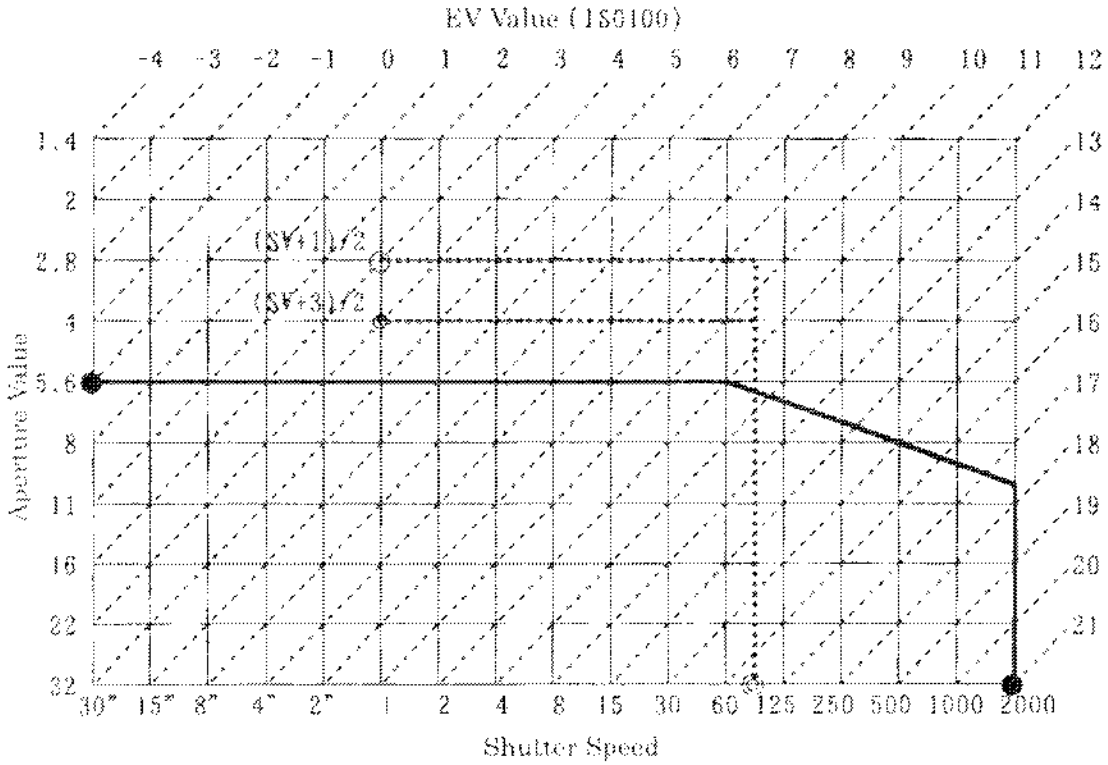
〔4〕 Close-Up Mode (🌷)



(5) Sports Continuous Mode (🏃)

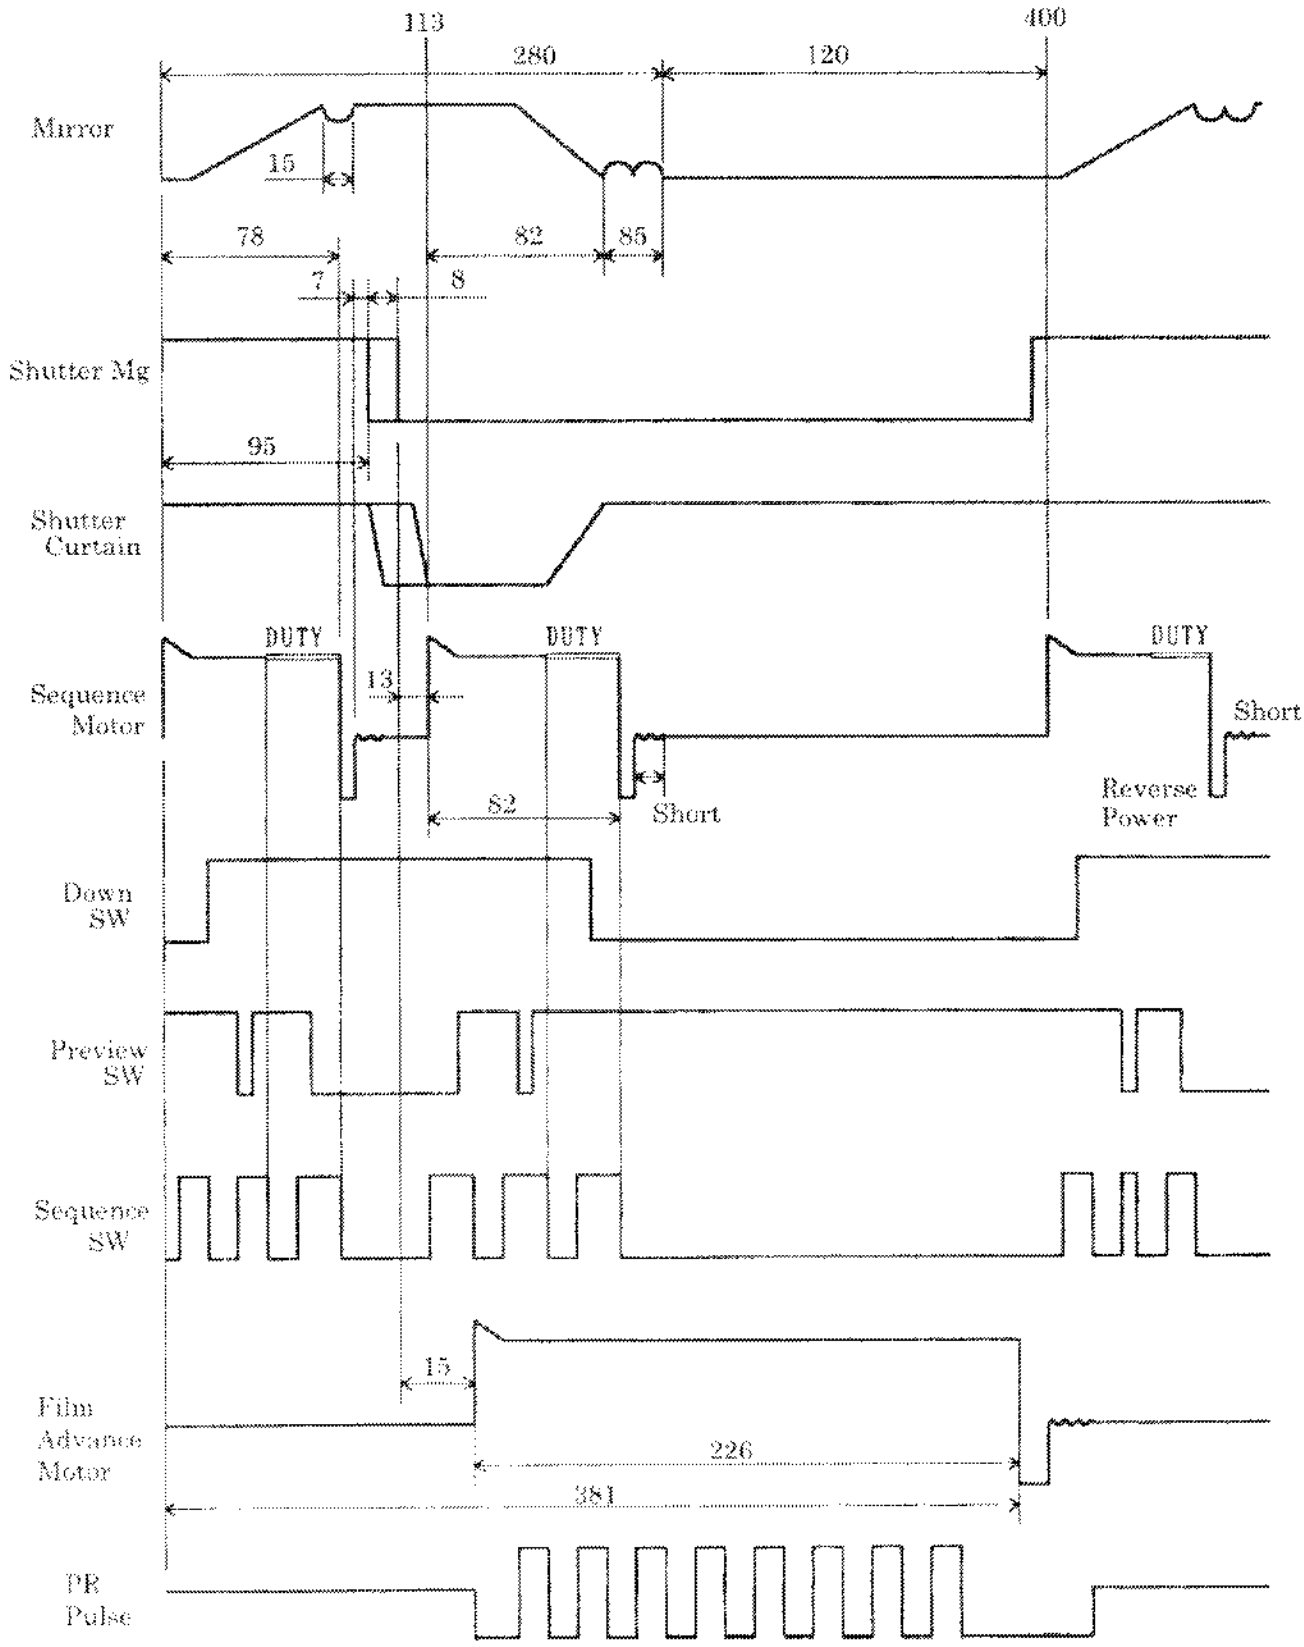


(6) Night Scene Mode (🌃)

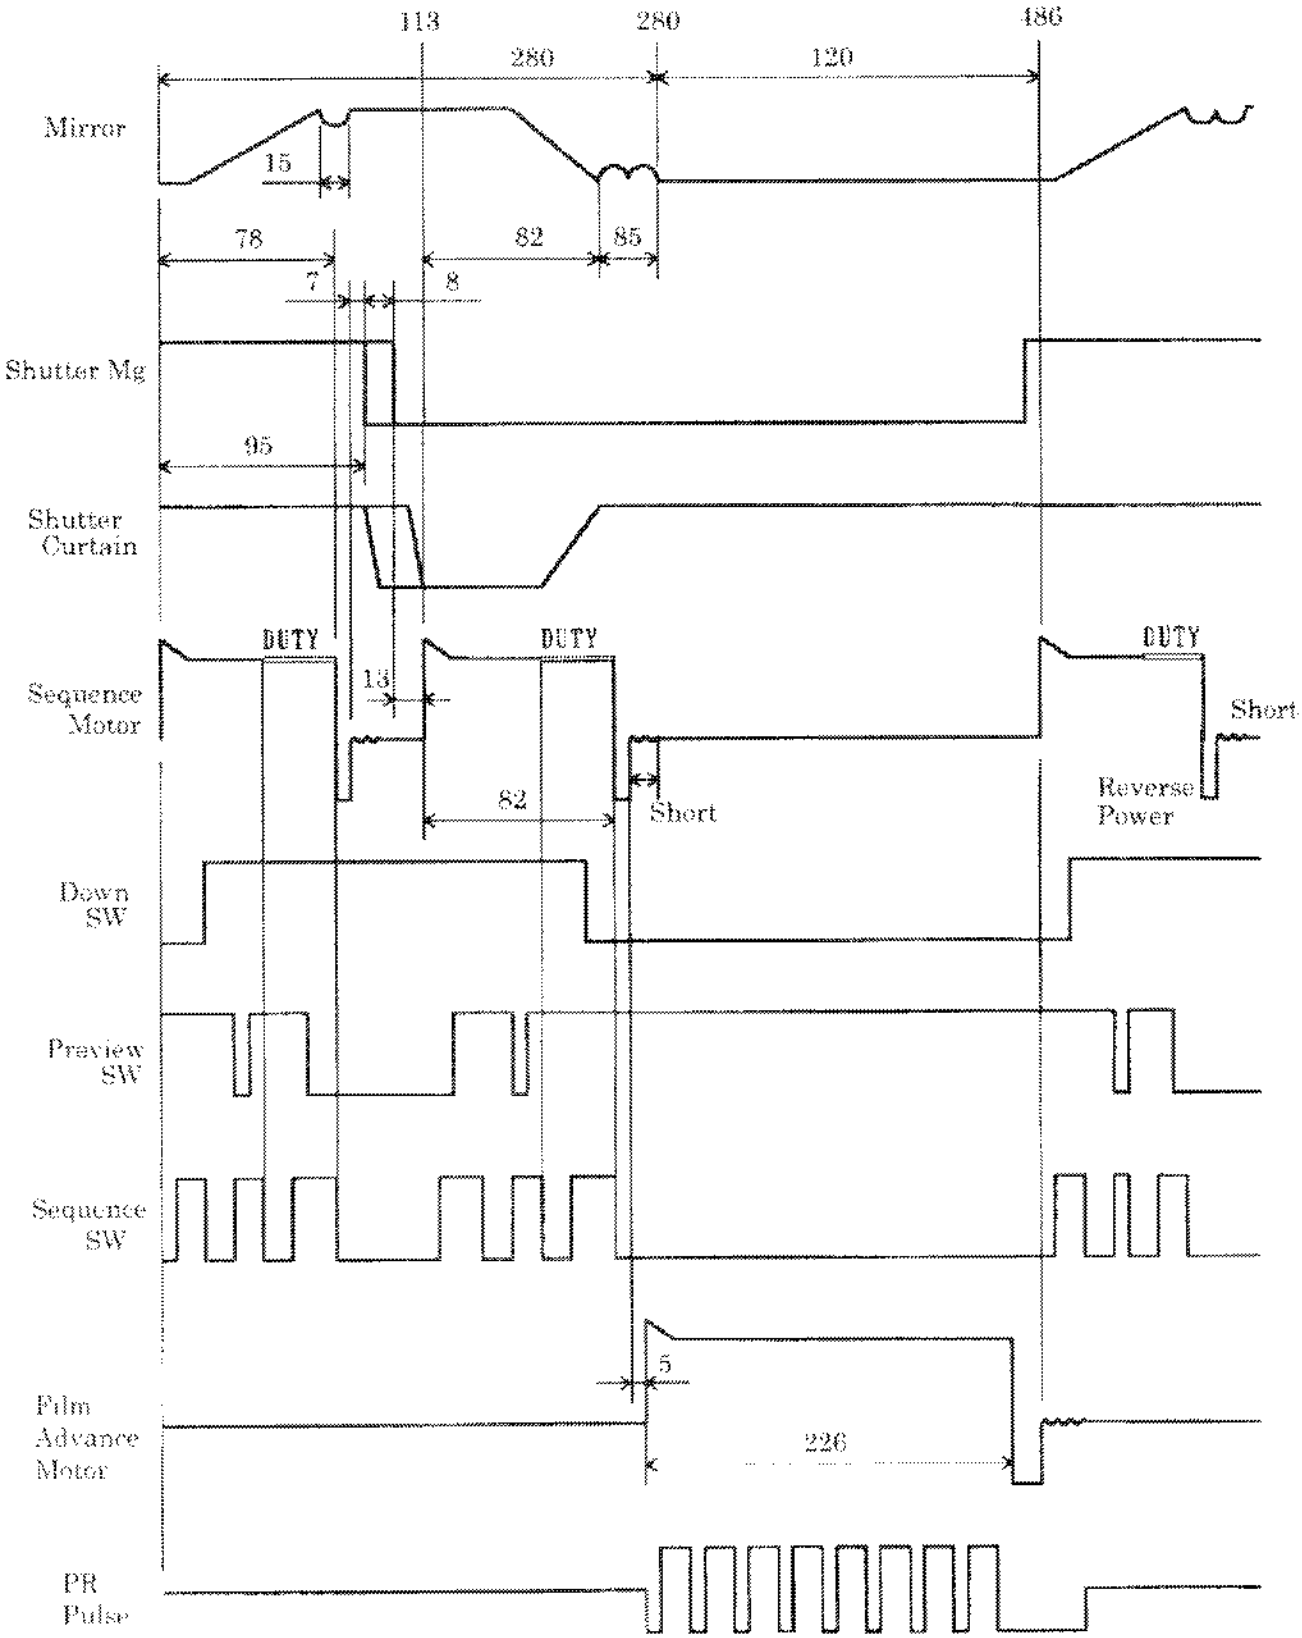


11. Sequence

Parallel Driving



Sequential Driving



12. Mechanism Switches

SWITCH NAME	LOCATION
Back Door Switch	Back Door Open/Close Lever

SP Pop Up Switch	Top Cover FPC (Top Cover Section)

DISASSEMBLY

1. SEPARATION OF THE FRONT BODY FROM THE REAR BODY

2. FRONT BODY

3. REAR BODY

DISASSEMBLING

⚠ WARNING

- Due to its internal high voltage area, make sure to check the safety when removing the cover.
- Be sure to discharge the static electricity from the main condenser according to the instruction in the repair manual after removing the Grip cover.

Note : ① In the assembling and disassembling sections of this manual, we took an initially produced bodies as a model to explain wiring, Wiring are subject to change depending on the period of production and may not conform with the current products. Refer to the actual model.

② Be sure to take off the battery before disassembly.

③ At disassembly, make sure to memorize how to arrange the wires, how to fix the screws, and the types of used screws.

④ Be sure to get yourself grounded because of the static electricity which exerts any serious adverse effect to ICs

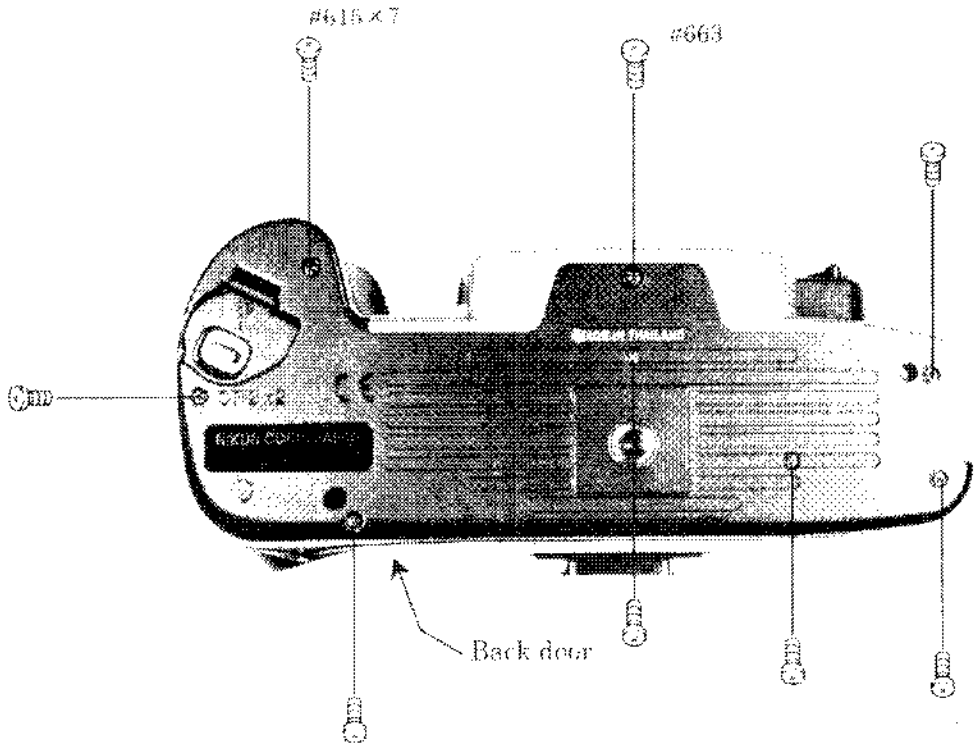
⑤ When you disassemble the camera body further than described in the disassembling section, refer to the exploded drawings and assembling section, since some parts are disassembled as a unit part.

1. SEPARATION OF THE FRONT BODY FROM THE REAR BODY

BOTTOMCOVER, BACK DOOR

• Pull out the shaft x 1 to the bottom first, and then remove the back door.

Notes) Never use the solvent when cleaning the pressure plate, but use the A-level dust cleaning cloth or Savina Minimax and wipe it softly because the pressure plate of this camera is coated with the special paint.

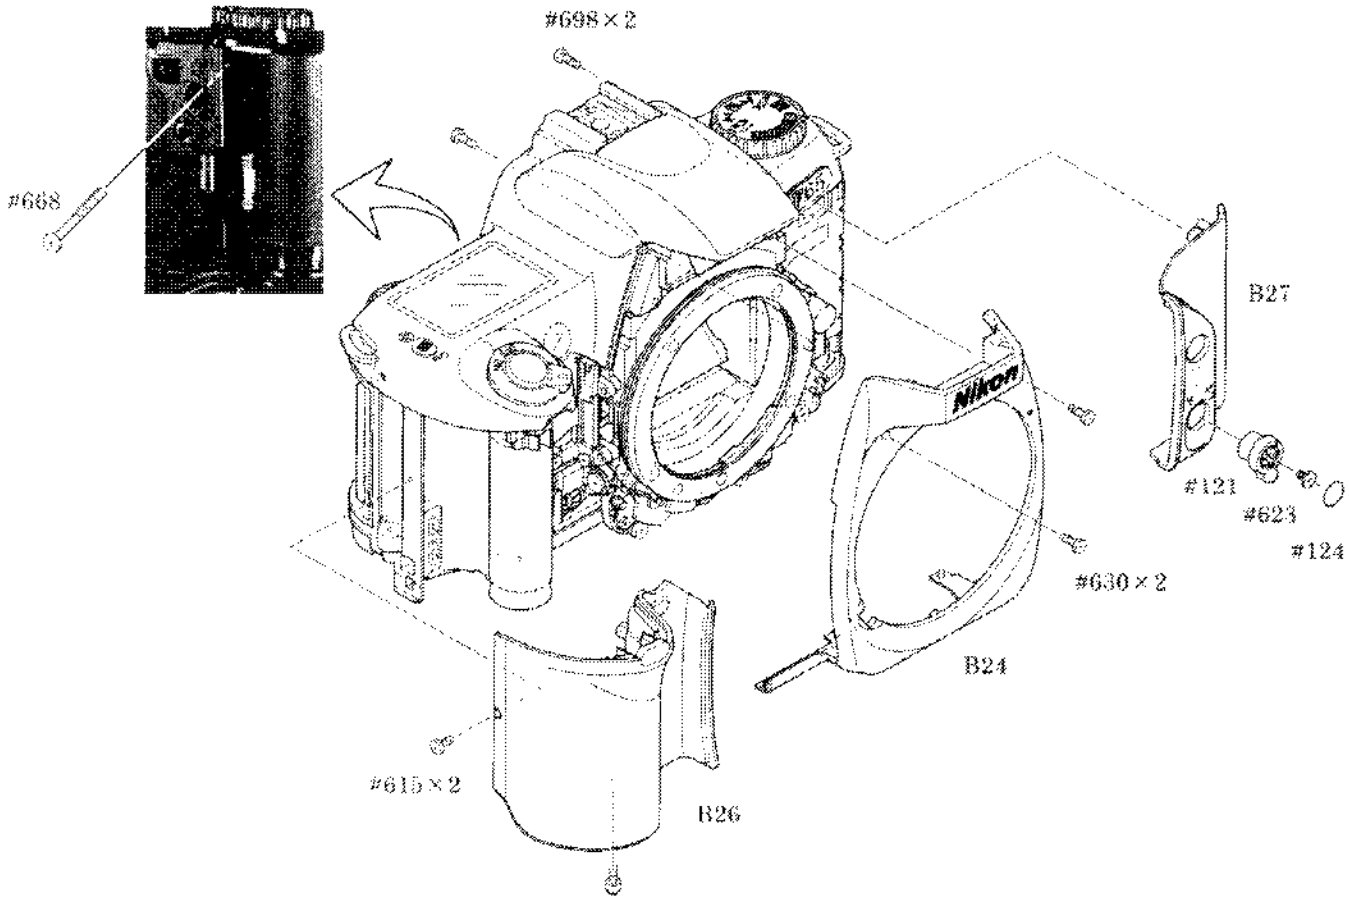


FRONT COVER, REWIND SIDE COVER, GRIP COVER

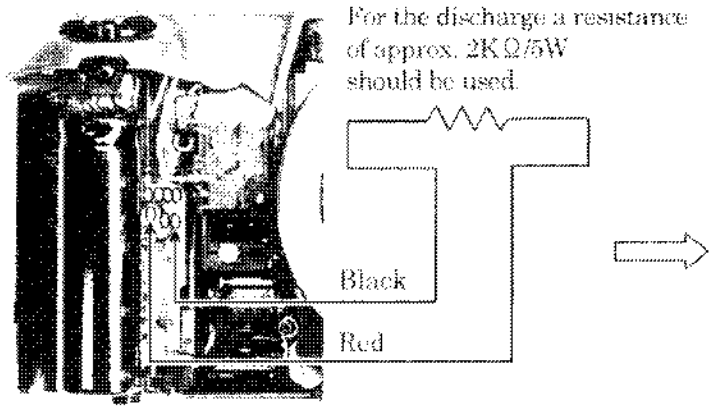
⚠ WARNING

- Due to its internal high voltage area, make sure to check the safety when removing the cover.
- Be sure to discharge the static electricity from the main condenser according to the instruction in the repair manual after removing the Grip cover.

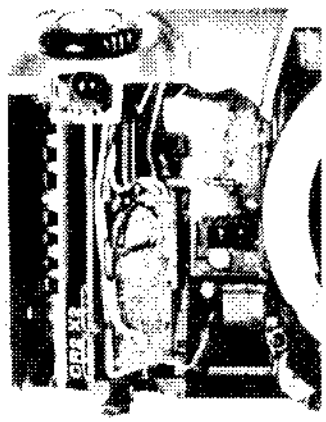
* The order of removal is from front cover B24 first.



* Discharging from the main capacitor

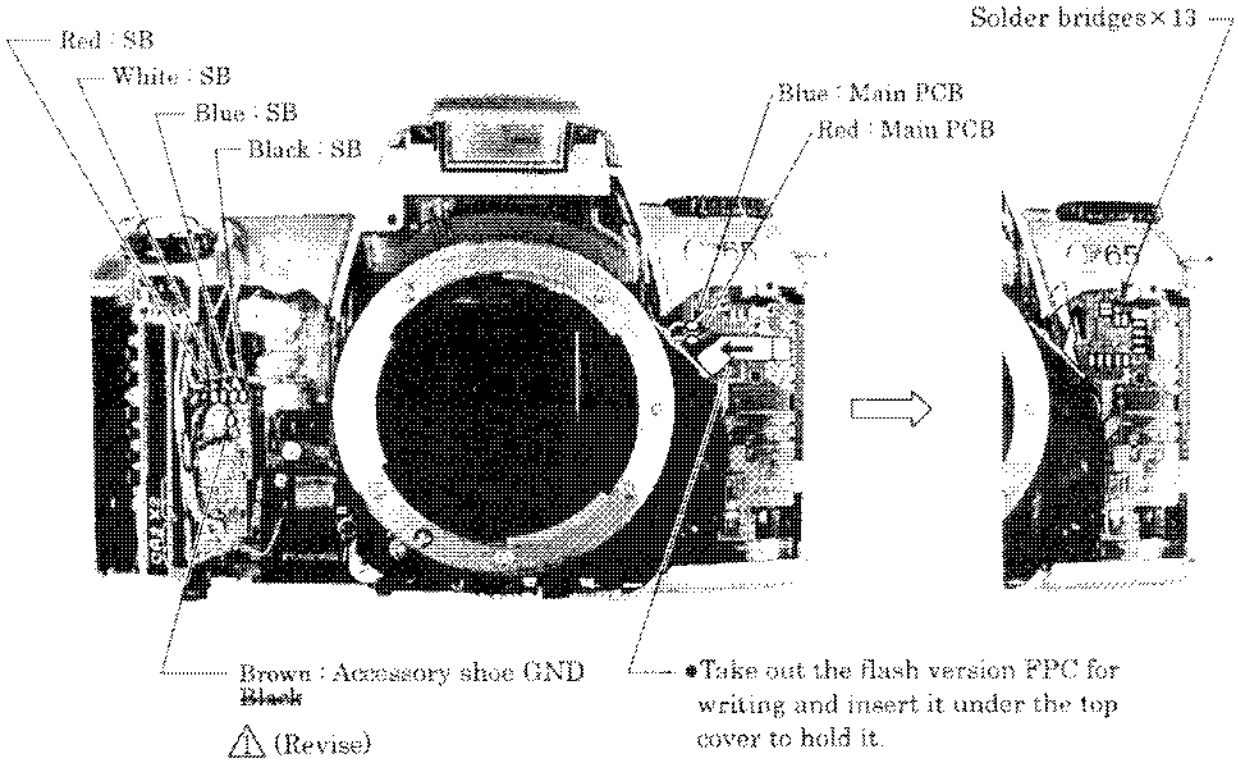


* After discharging, unsolder the red and black wires, and then remove the main condenser.

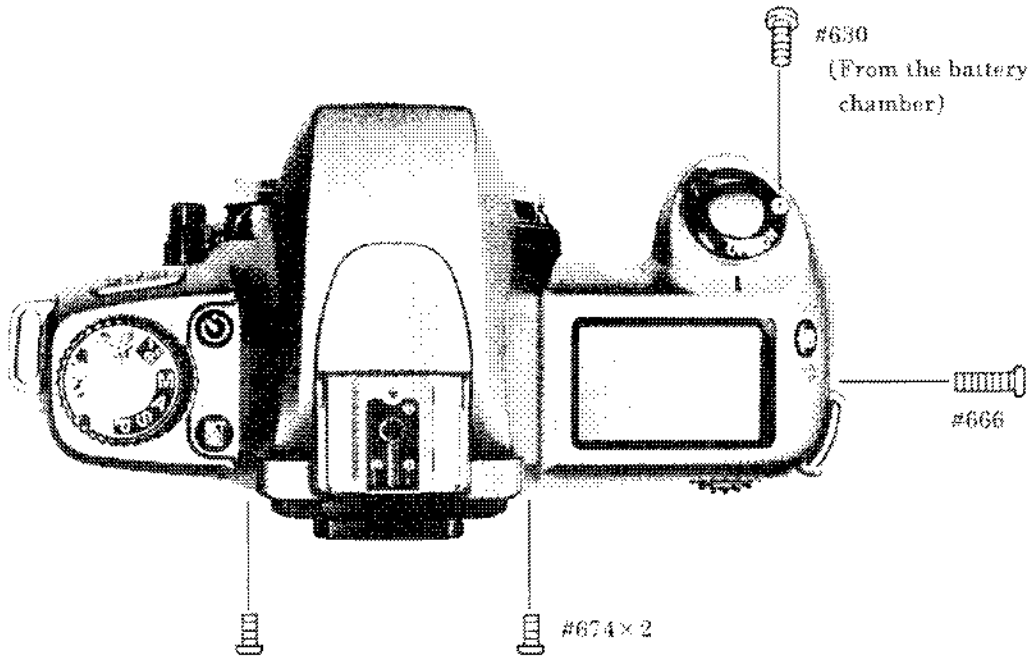


TOP COVER

1. Removal each wires and solder bridges

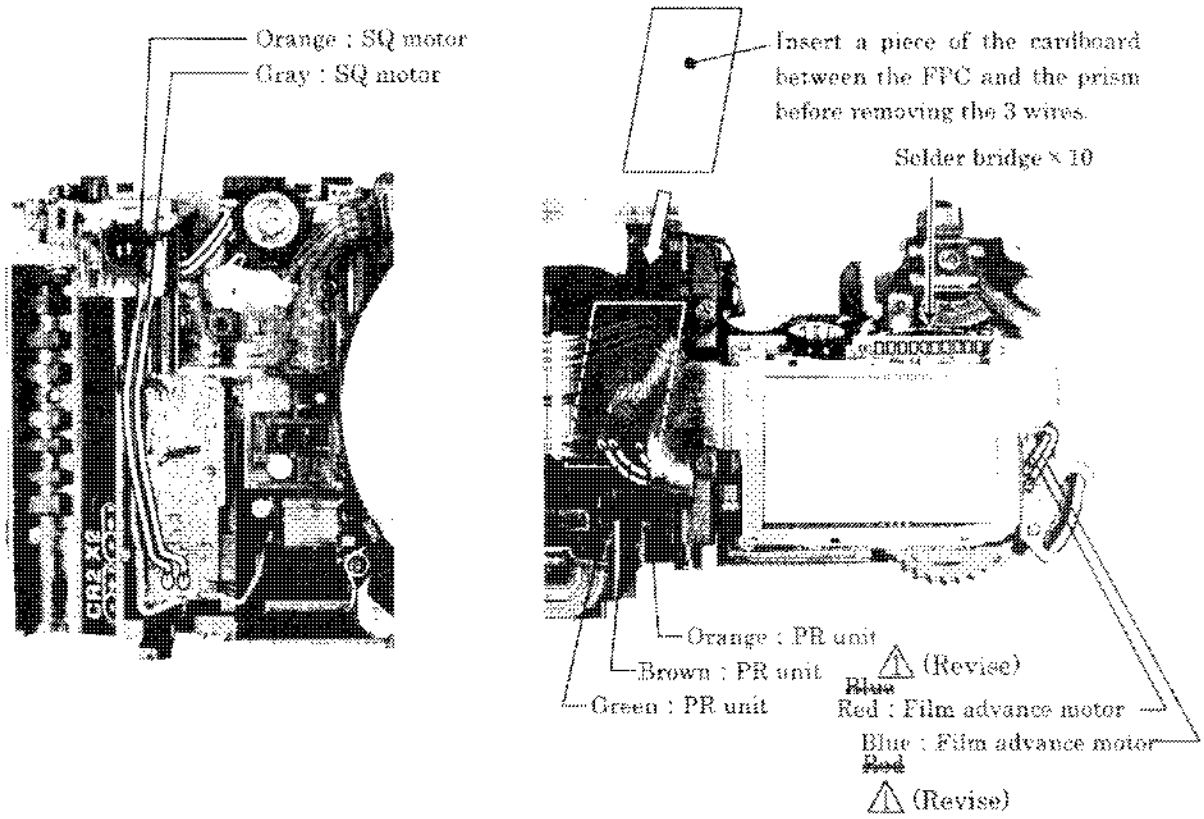


2. Removal of screw(s)

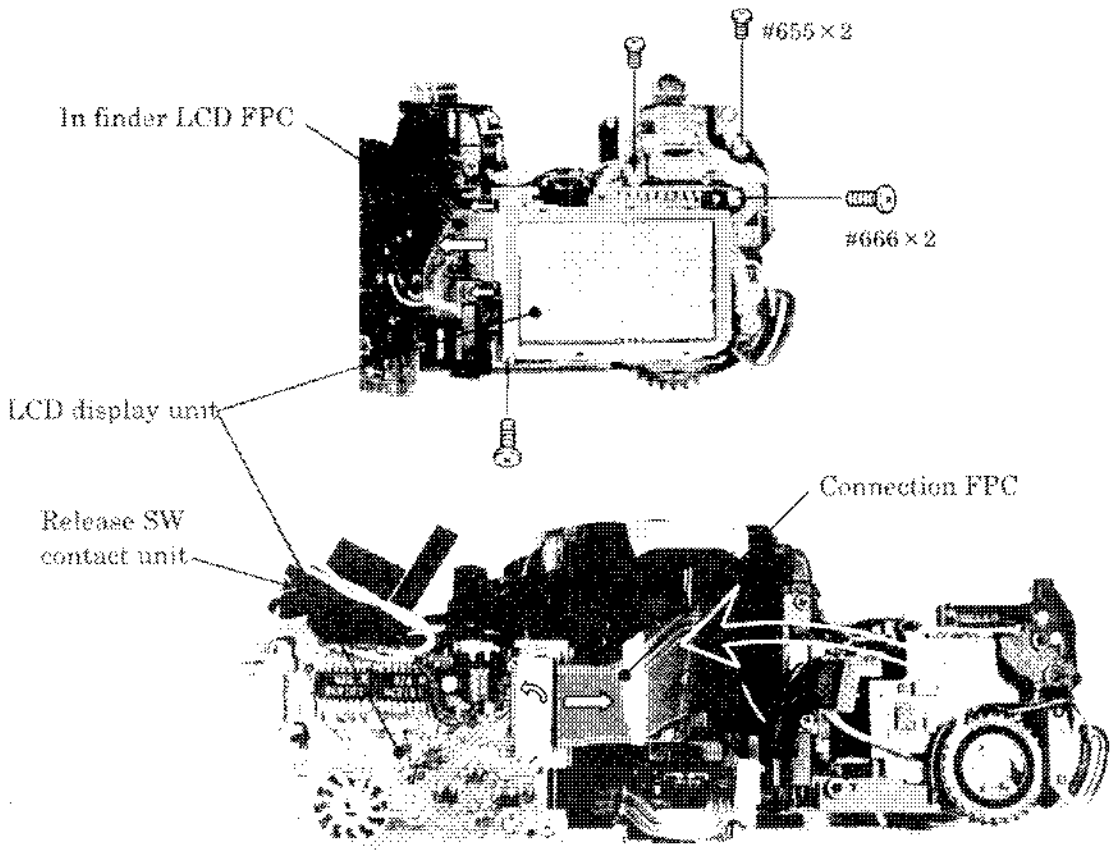


LCD DISPLAY UNIT

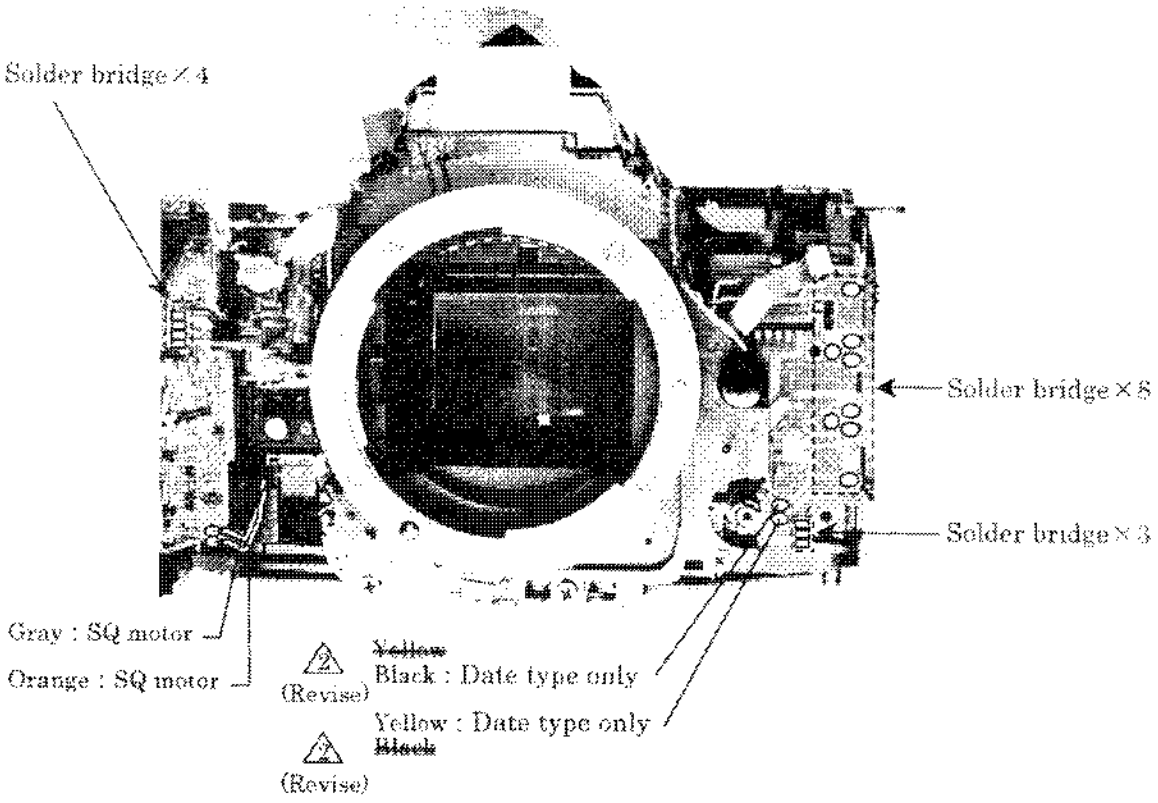
1. Removal each wires and solder bridges

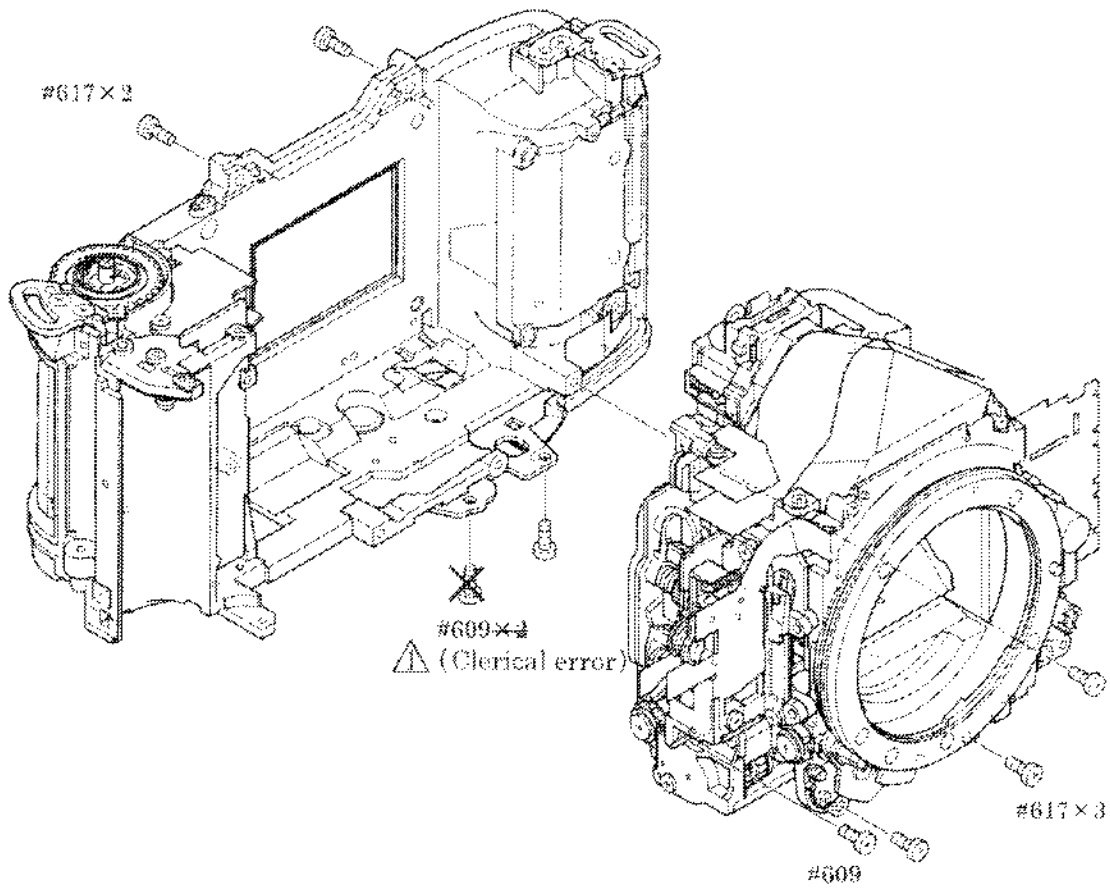


2. Removal of screws and FPC from connector



SEPARATION OF THE FRONT AND REAR BODIES





サービス計画課 M

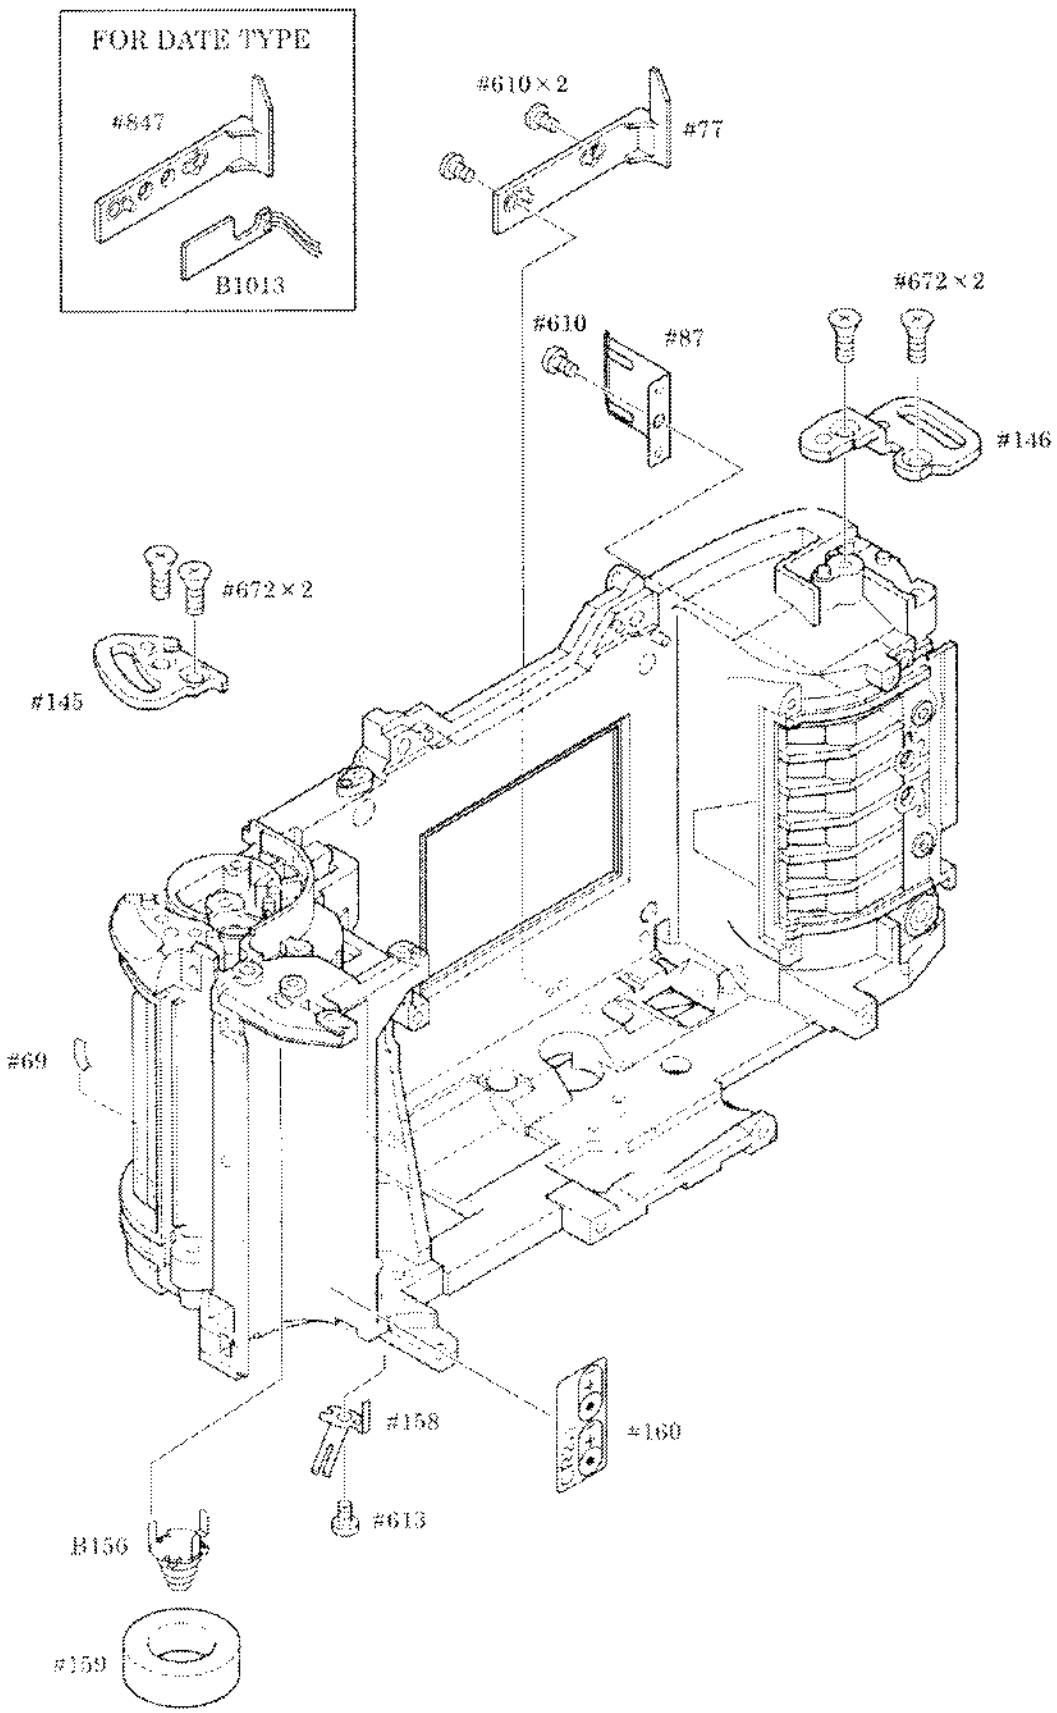
SMALL PARTS OF REAR BODY



ASSEMBLY AND ADJUSTMENT

1. FRONT BODY

2. REAR BODY

3. MOUNTING BOTH THE FRONT AND THE REAR BODIES

ASSEMBLY AND ADJUSTMENT

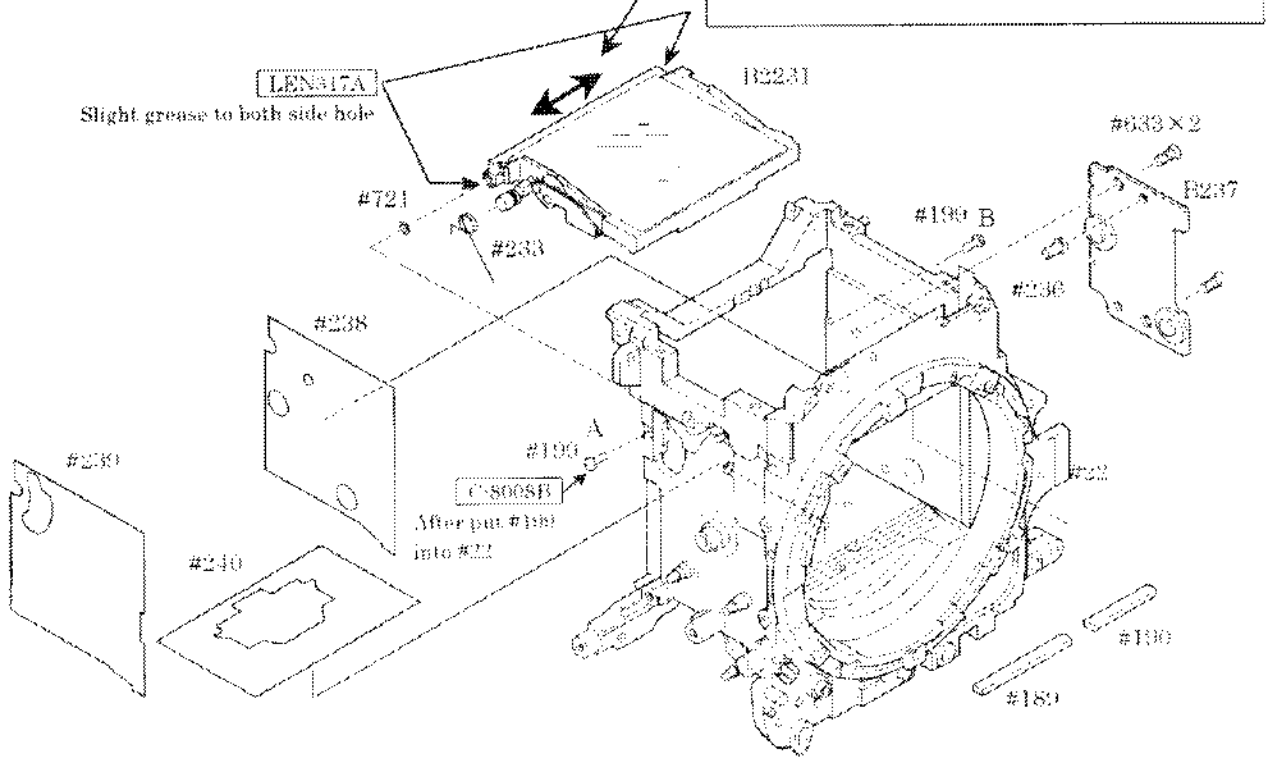
1. FRONT BODY

MIRROR HOLDER

① Affix both flocked paper and mirror receipt mold on the front body #22.
(Extrusion from each side of #22 is not allowed).
② Press the shaft #199 A side into the front body #22 and press 1/3 of the shaft #199 B side into the front body #22.
③ Place the washer #721 through the shaft #199 A side.
④ Assemble the mirror dust cleaner B2231 in the front body #22 aligning it with the shaft #199 A side and press the shaft #199 B side in the body to the end, aligning it with the mirror dust cleaner B2231.

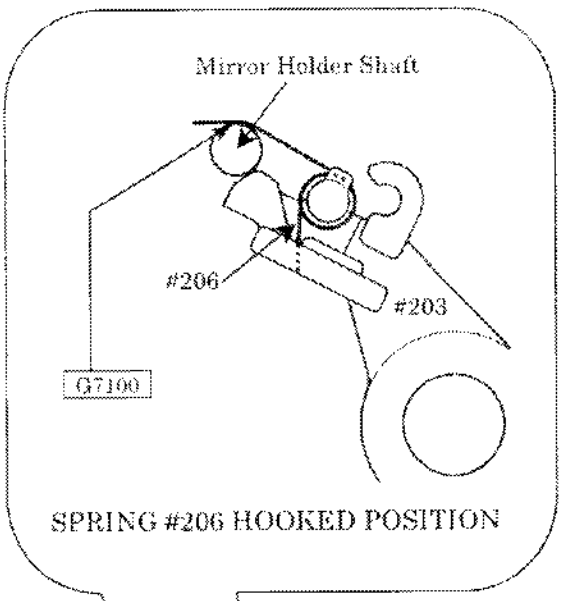
After the mirror dust cleaner is assembled in the front body #22 in step ④ above, check the thrust backlash. If the backlash is outside standard range, replace it by either of three thickness types of the washer #721 and adjust it.

Backlash Standard: 0.02 mm or less (0 is not allowed)



⑤ Stand the mirror up and assemble the sub-mirror deflection pin #236 into the front body #22
⑥ Align the hole on the mirror box PCB B237 with the boss on the front body #22, and assemble and fix them using the screw #633×2.

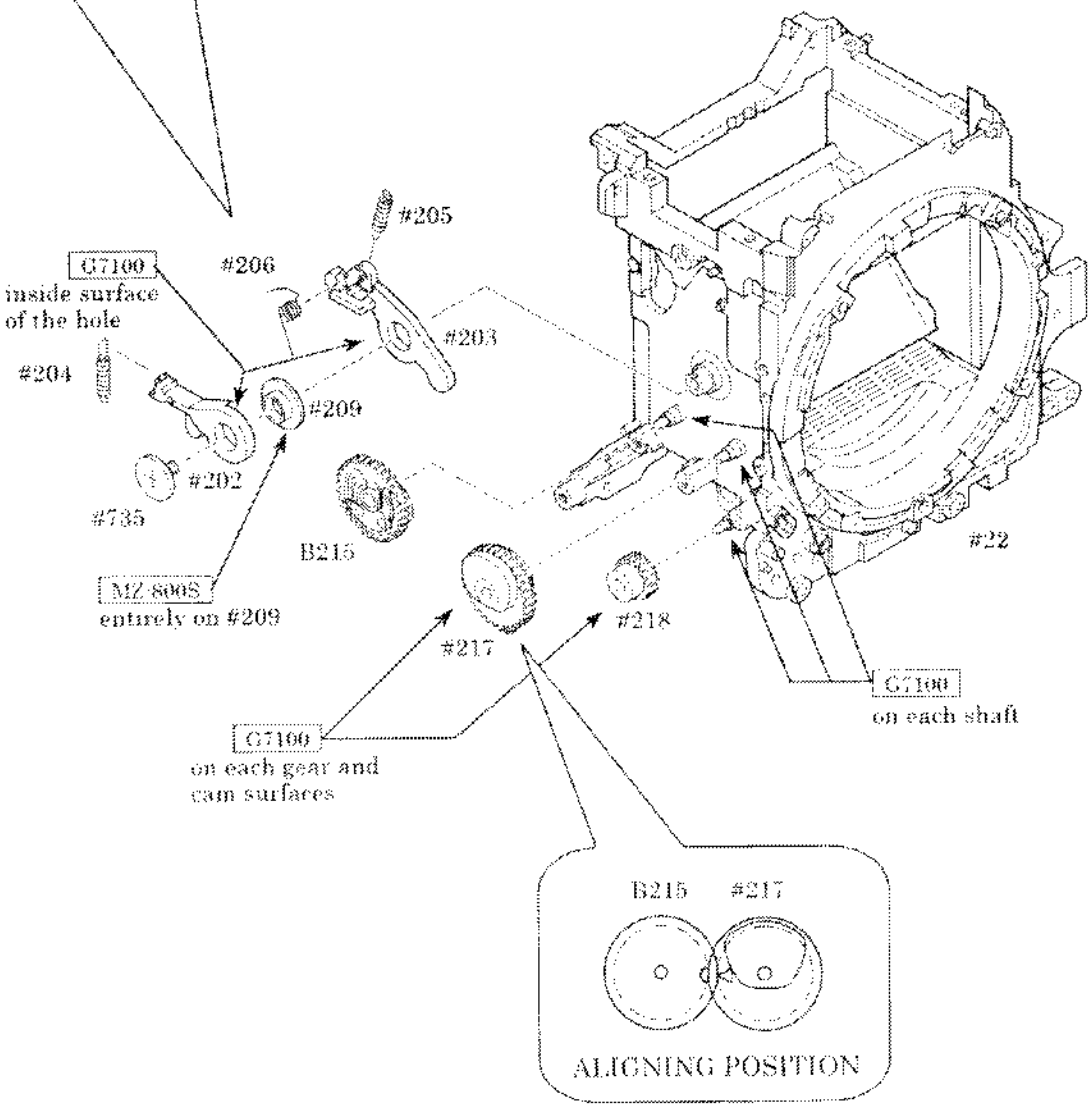
MIRROR UP LEVER



① Assemble the mirror UP levers #203, #209 and #202 on the front body #22 in this order and fix them with screw #735.

② Assemble the SQ shutter charge cam B215, #217 and #218 in the front body #22.

③ Hook the springs #204, #205 and #206 onto each lever.



APERTURE CONTROL UNIT

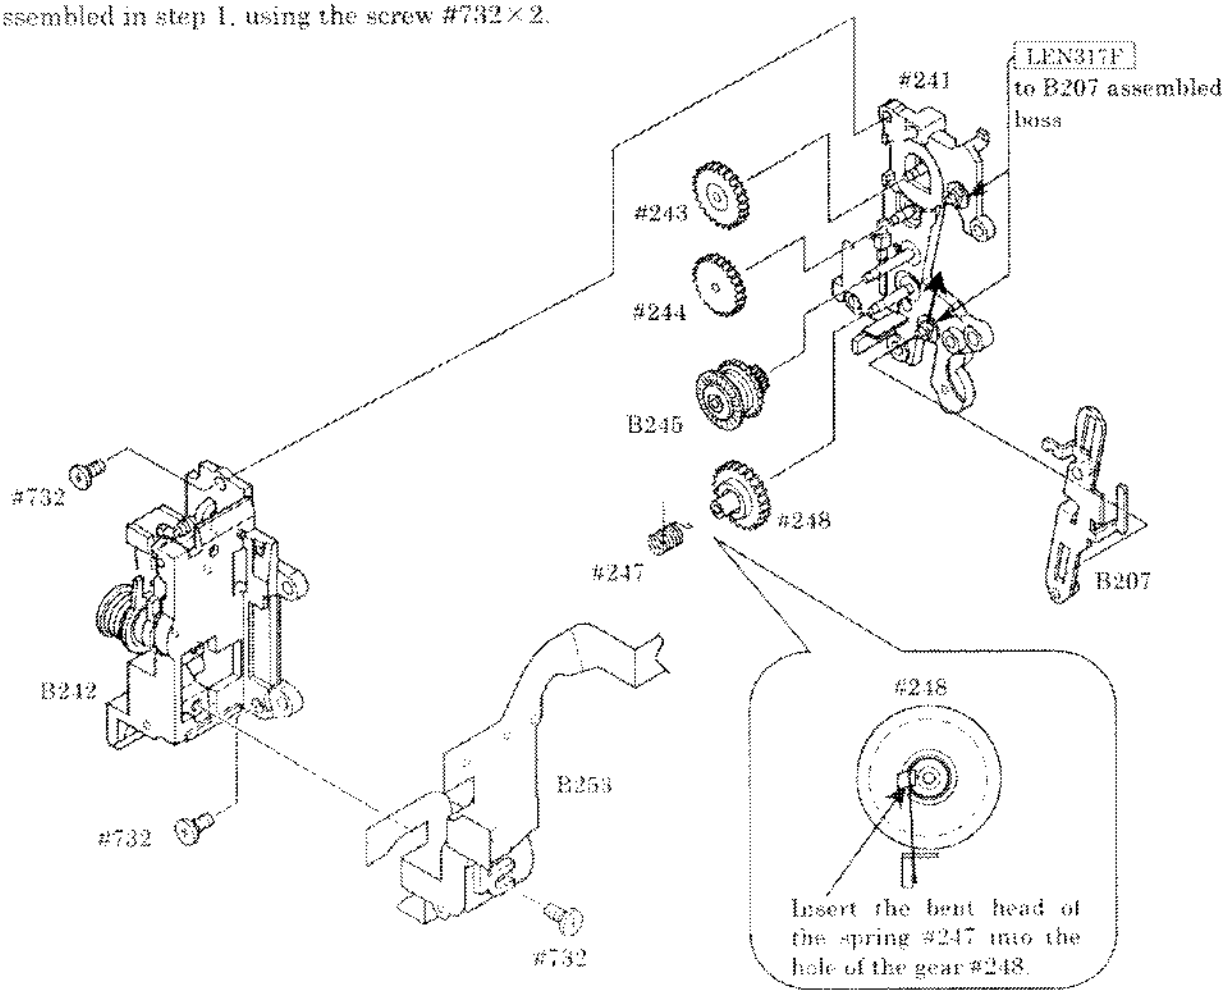
1. Assembly of Aperture Upper and Lower Base plates

① Assemble the gears #243 and #244 and Aperture driving lever B207, gear #248, spring #247 and gear B245 onto the Aperture control lower Base plate #241 in this order.

Note : The Aperture driving gear B242 should be slid to the arrow direction (upper) in advance.

② Attach the Aperture upper base plate on the Aperture control unit #241 which has been assembled in step 1. using the screw #732×2.

● Oil the four gear shafts using "Oil: CFD-005 5H ".



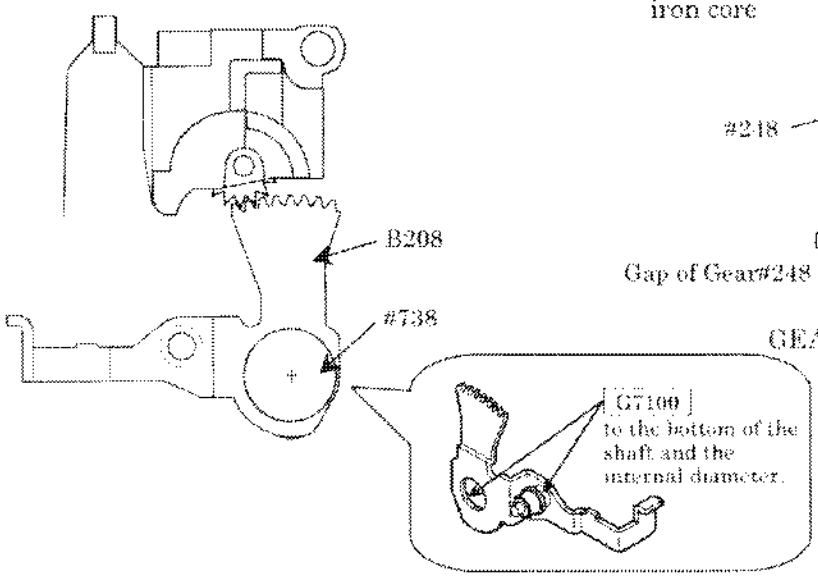
③ Attach the PI base plate unit B253 to the aperture control base unit assembled at Process ② by the both-sided adhesive tape on B253.

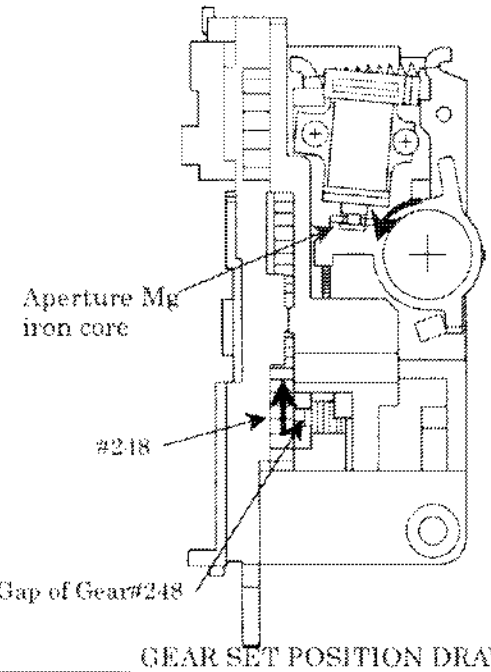
④ Fix the PI section of the Aperture PI FPC unit B253 using the screw #732.

2. Aperture Lever Installation

① Turn the gear #248 to the arrow direction as shown in the Gear Set Position Drawing. Turn one more time after the spring #247 starts working, and stop it when the groove of the gear #248 can be seen. Pull out the Aperture Mg iron core with forceps and fix the aligned gears.

② Attach the Aperture lever B208 at the position as shown in the figure, using the screw #738.



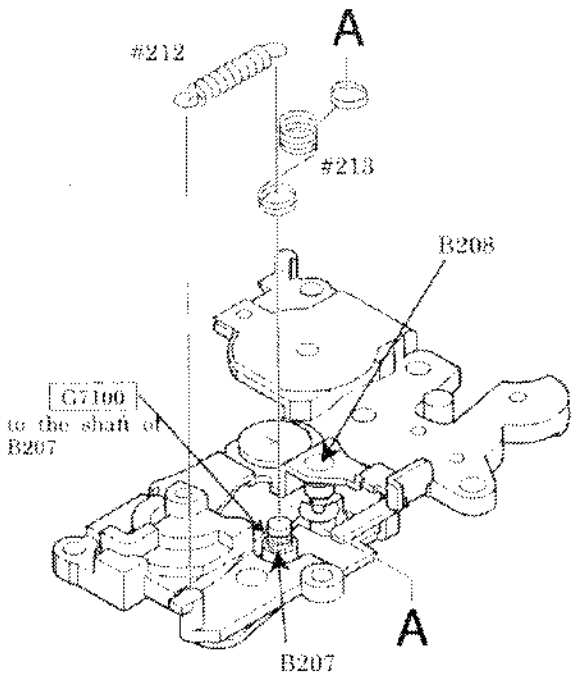


GEAR SET POSITION DRAWING

3. Hook the spring

③ Hook the double wound side of the spring #213 on the column of the Aperture lever B208 and triple wound side of the spring #213 on the column of the Aperture control lever B207.

④ Hook the spring #212 on the position as shown in the figure.

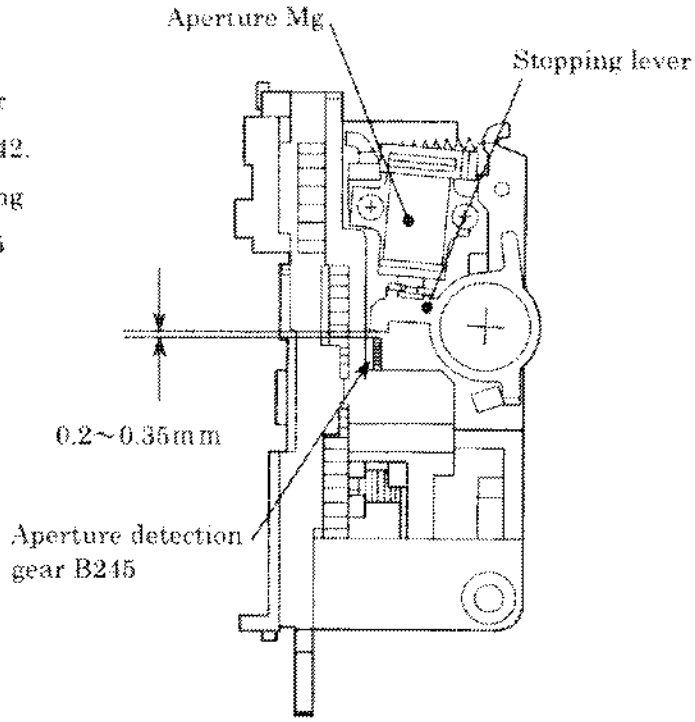


Check: Push down the Mg iron core which has been projected in the procedure of "2. Aperture Lever Installation" and make sure that when the Aperture lever B208 is pushed down with a finger it securely returns to the upward (installed position) when finger is released.

4. Adjustment for the aperture Mg position

• Adjust the aperture Mg position as the following procedure when disassembling or replacing the aperture upper base unit B242. Measure the clearance between the stopping lever and the aperture detection gear B245 and make it be in the standard

STANDARD : 0.2~0.35mm



• Adjustment procedure

Adsorb the iron core of the aperture Mg to the Mg side during the adjustment.

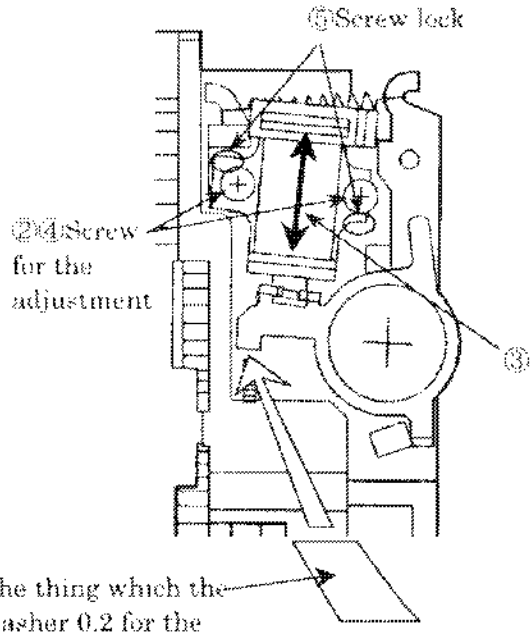
① Put the washer of 0.2 mm into the clearance to be adjusted.

② Loosen the screw for the adjustment.

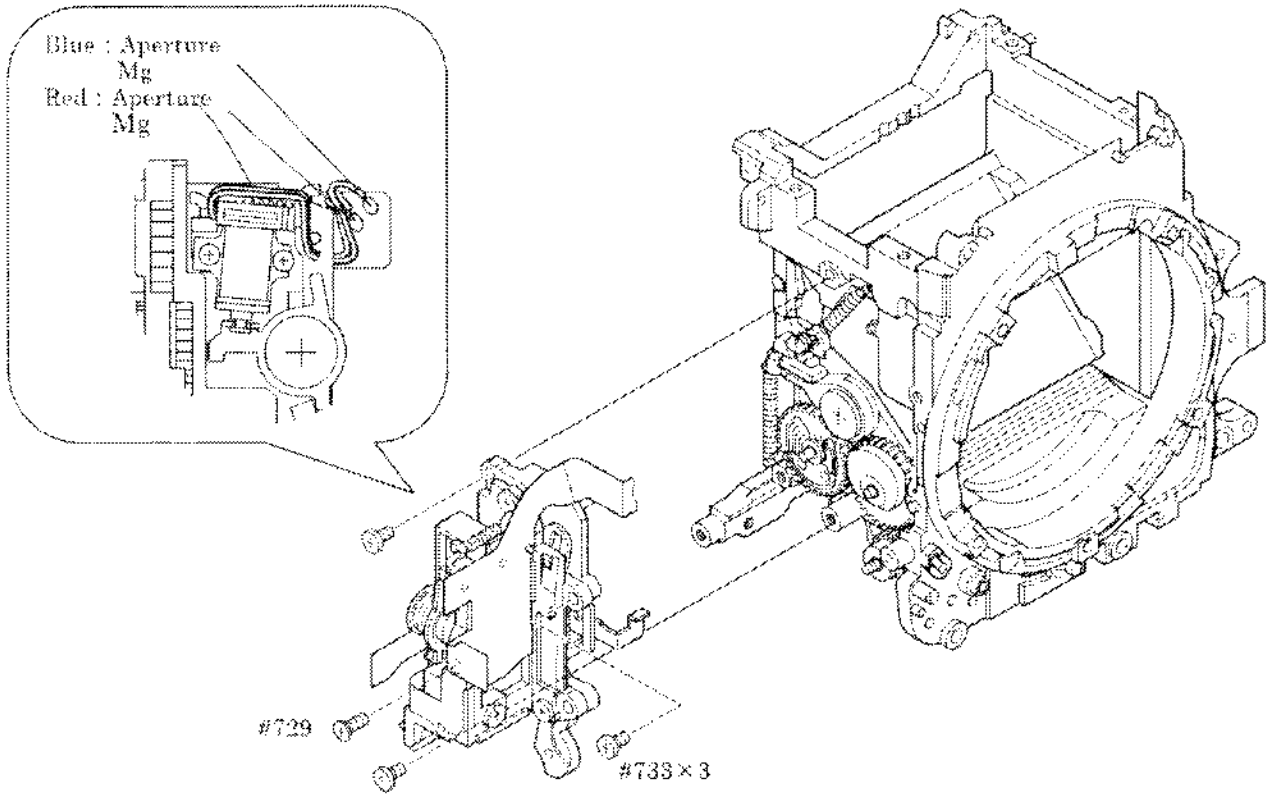
③ Move the aperture Mg to make the above clearance be the same thickness as the washer

④ Drive the screw for the adjustment and fix the aperture Mg.

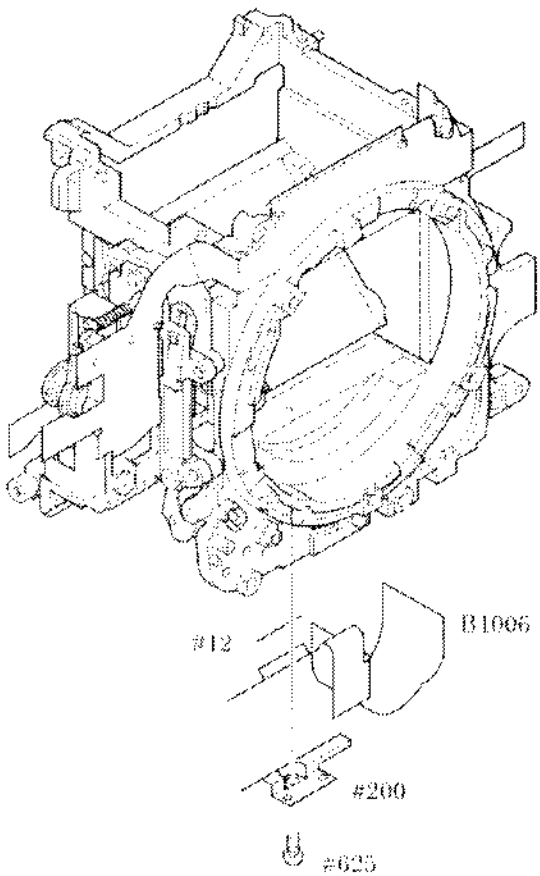
⑤ Fix the Mg by the screw lock.



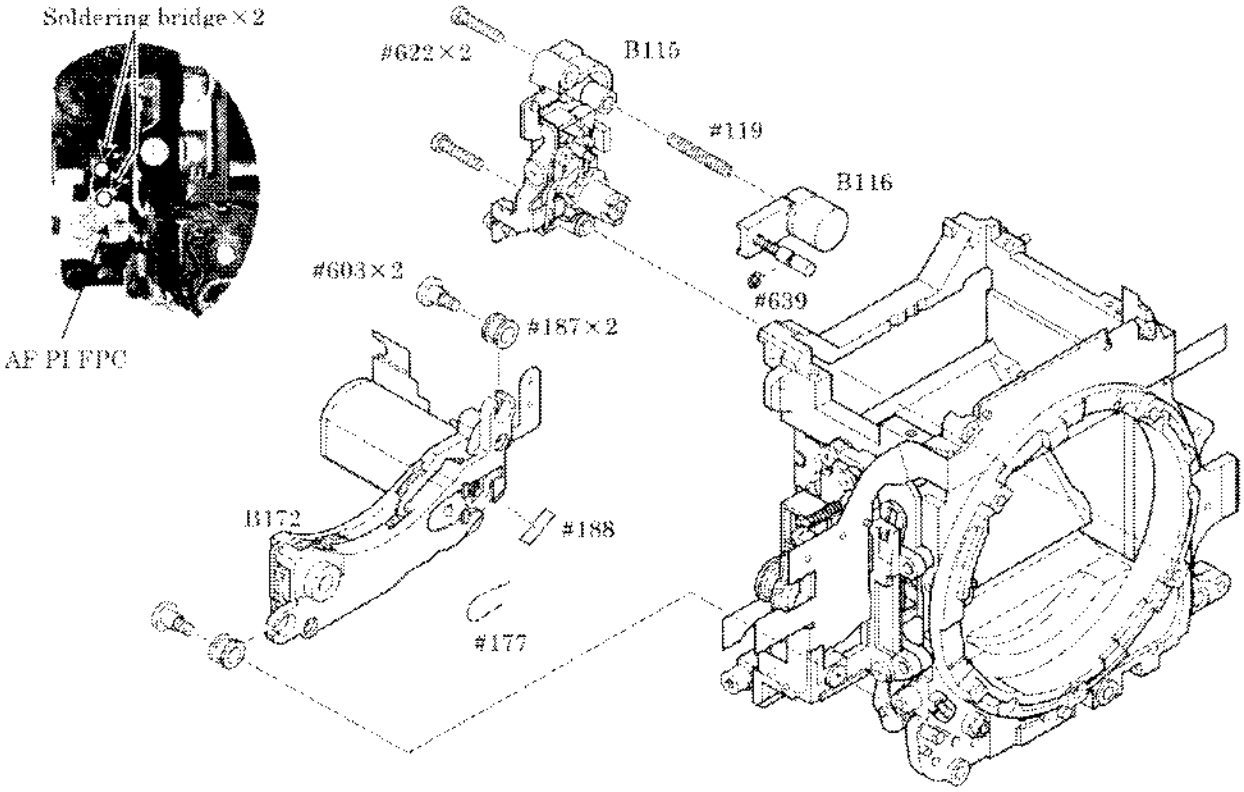
5. Installation of the Aperture Control unit on the Front Body



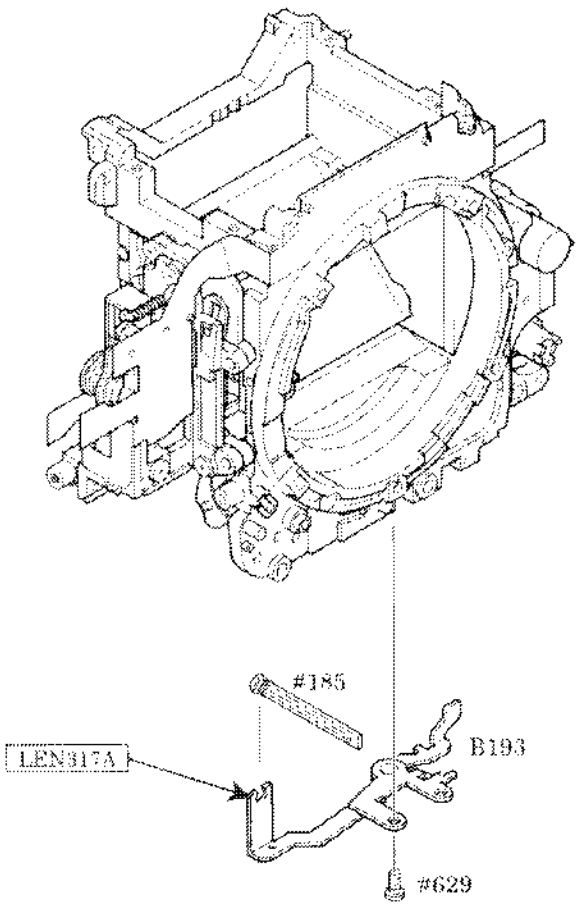
TTL FPC UNIT



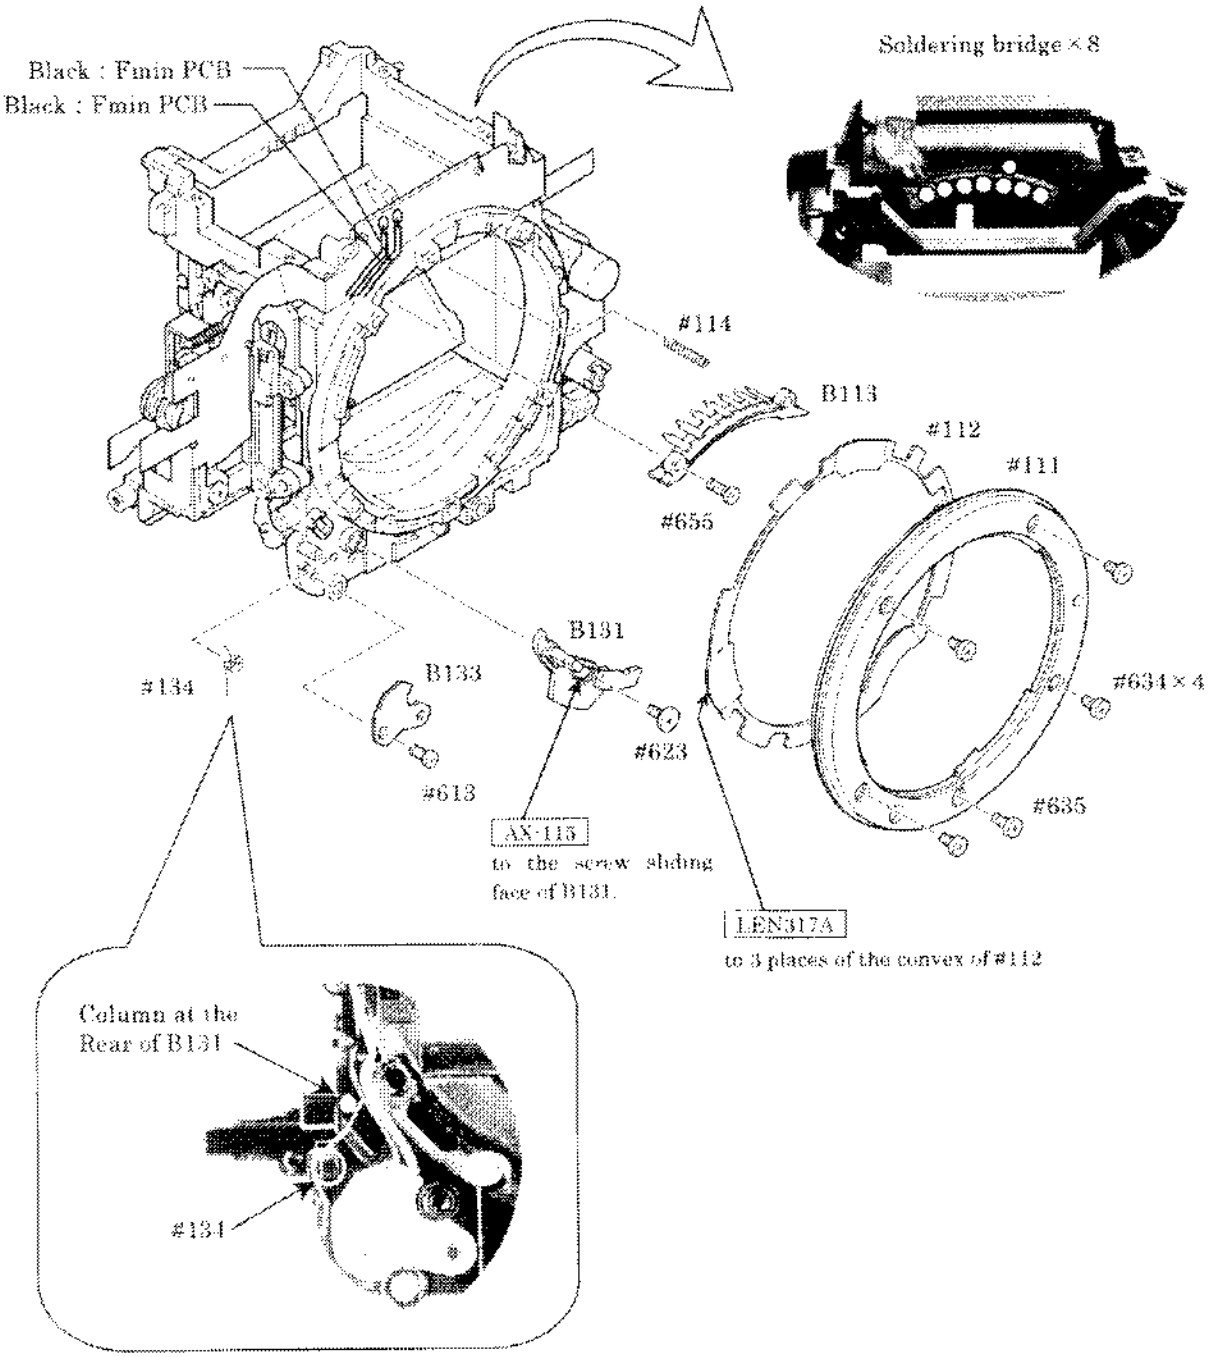
AF DRIVING UNIT, AM SWITCH UNIT



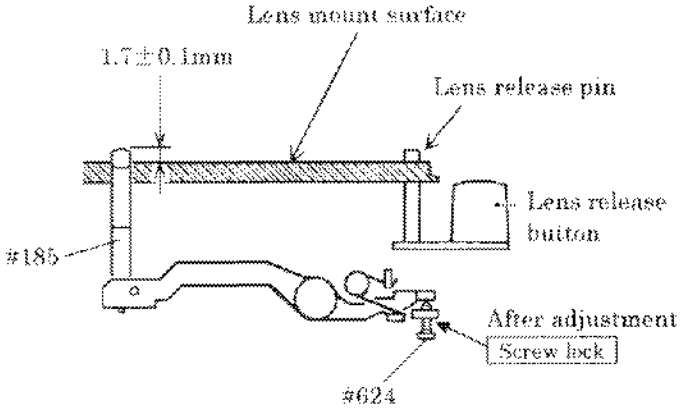
HORIZONTAL AF LEVER UNIT



BAYONET MOUNT



HIGHT ADJUSTMENT OF AF COUPLING SHAFT #185



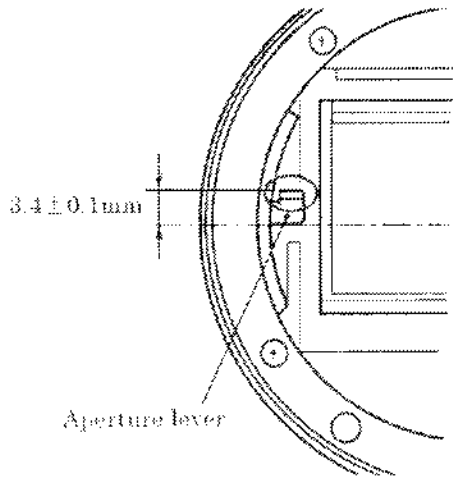
① Set the A/M change-over cam #122 to "S". After pressing the lens quick-disconnect button two or three times, measure the height of the AF coupling shaft #185.

② Adjust the height of the AF coupling shaft using screw #624.

③ The AF coupling shaft should not protrude over the lens mount surface, when the height of lens release pin is adjusted to 0.4mm.

④ After adjusting, secure screw #624 using Screw Lock.

ADJUSTMENT OF APERTURE LEVER POSITION

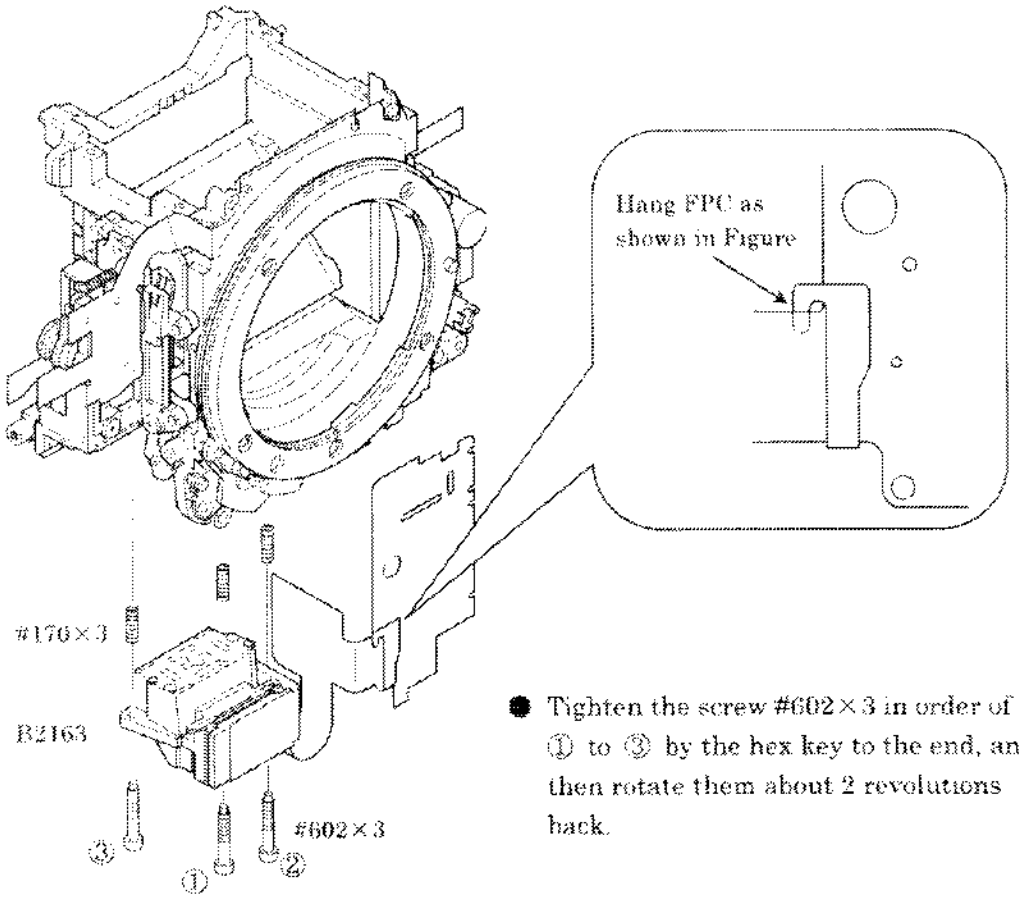


● Measure the height of the aperture lever using tool J18004.

Standard Value : 3.4±0.1mm

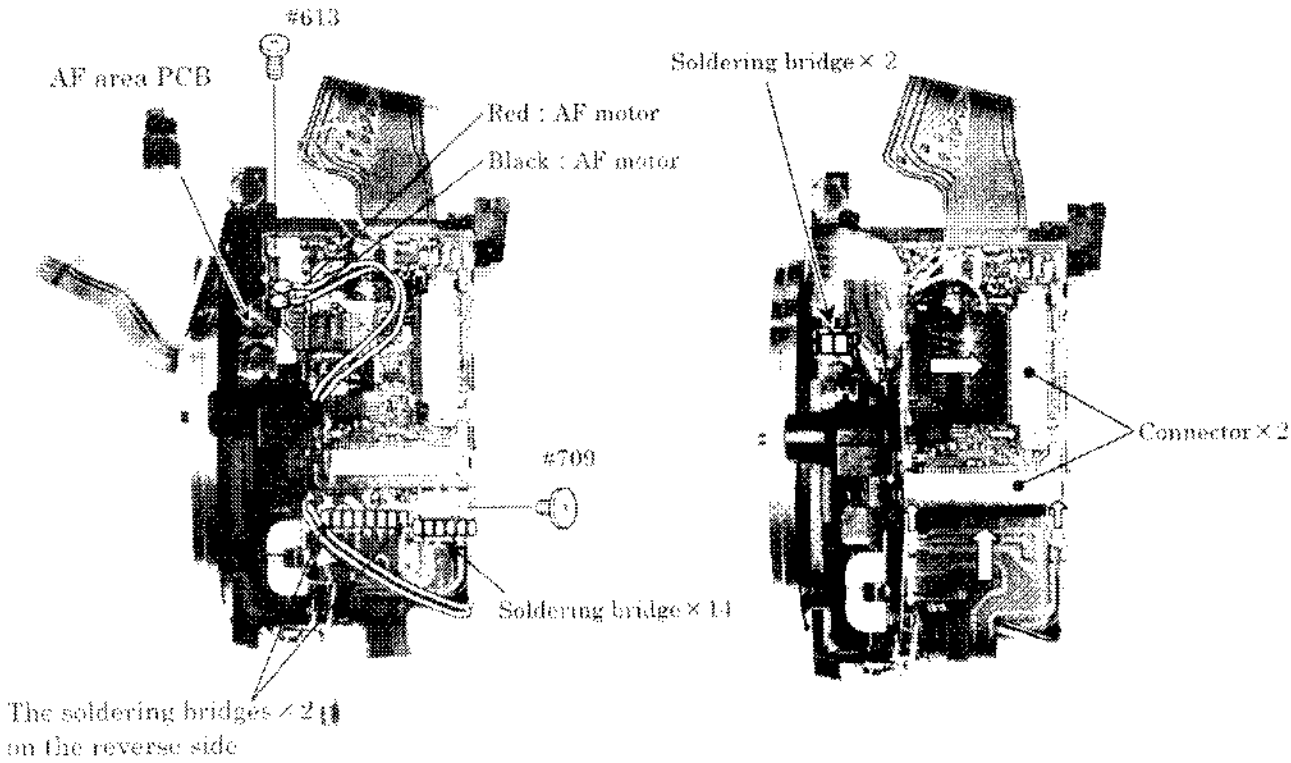
If the height of the aperture lever is out of the standard value, bend the circled position to adjust. While adjusting, take care not to bend the inside lever and stopper portion.

AF SENSOR UNIT



● Tighten the screw #602×3 in order of ① to ③ by the hex key to the end, and then rotate them about 2 revolutions back.

MAIN PCB

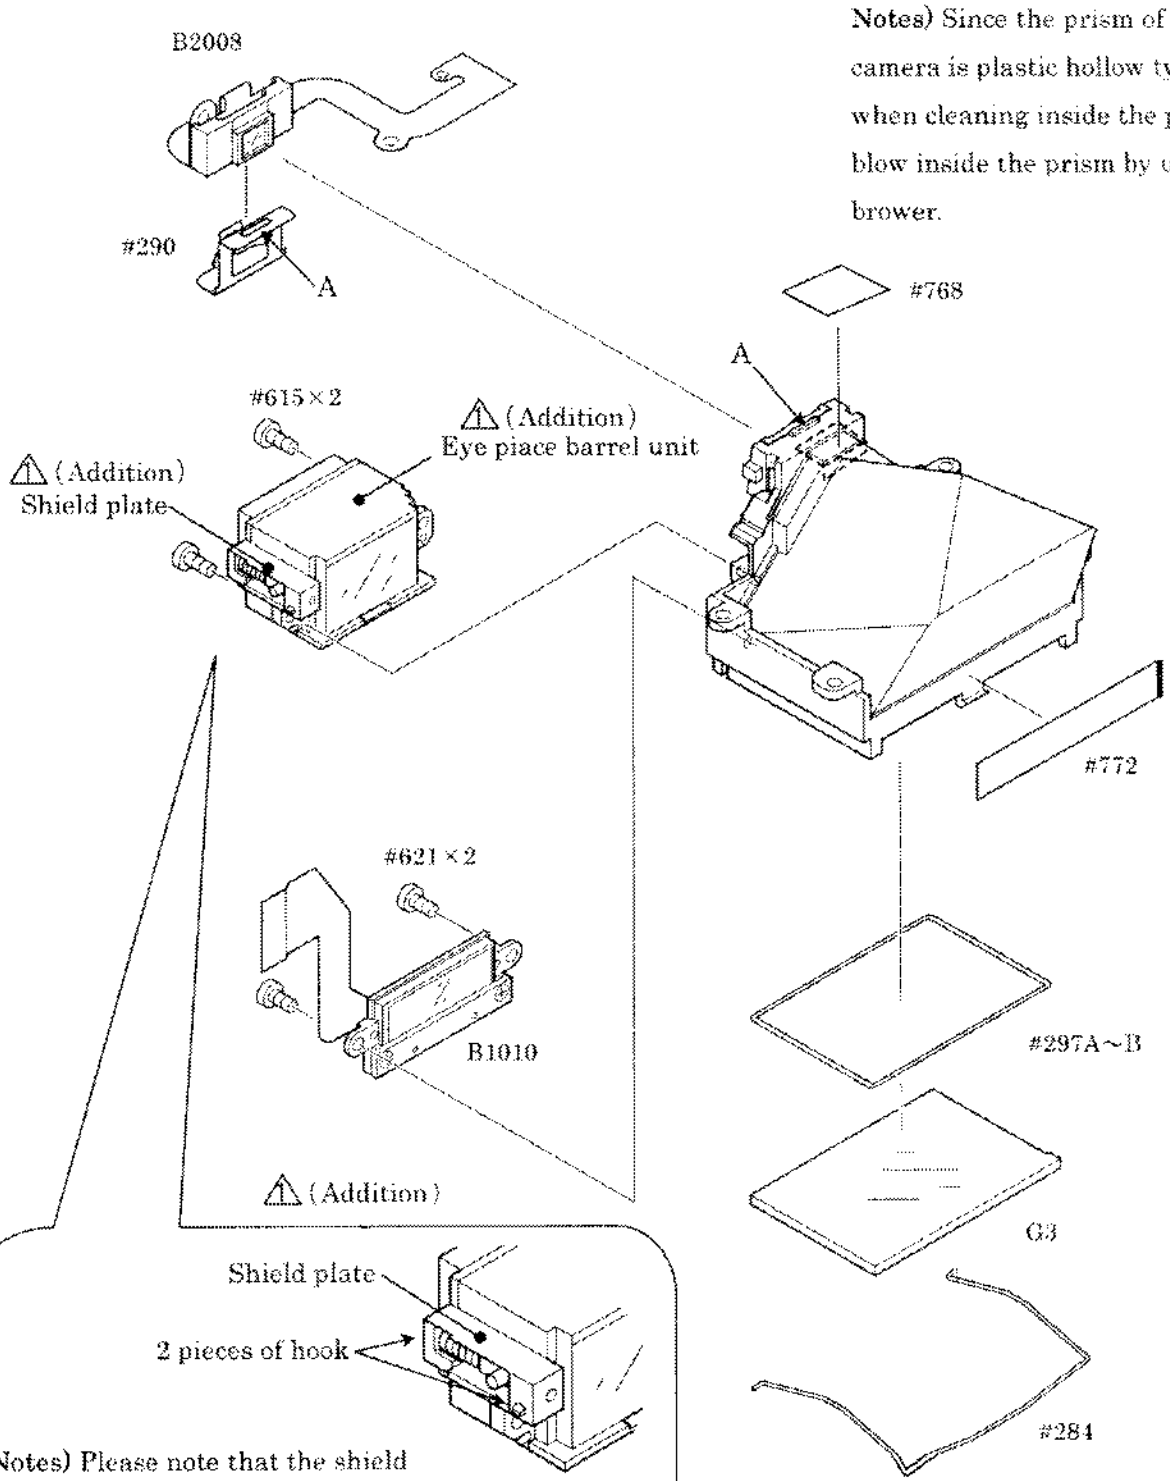


PRISM BOX UNIT

1. Assemble of Prism box section

•Set the AE SPD retainer #290 after putting the metering FPC unit which is fold double as shown in Figure and fitting the concave A and the convex A in Figure. (Fix it temporarily)

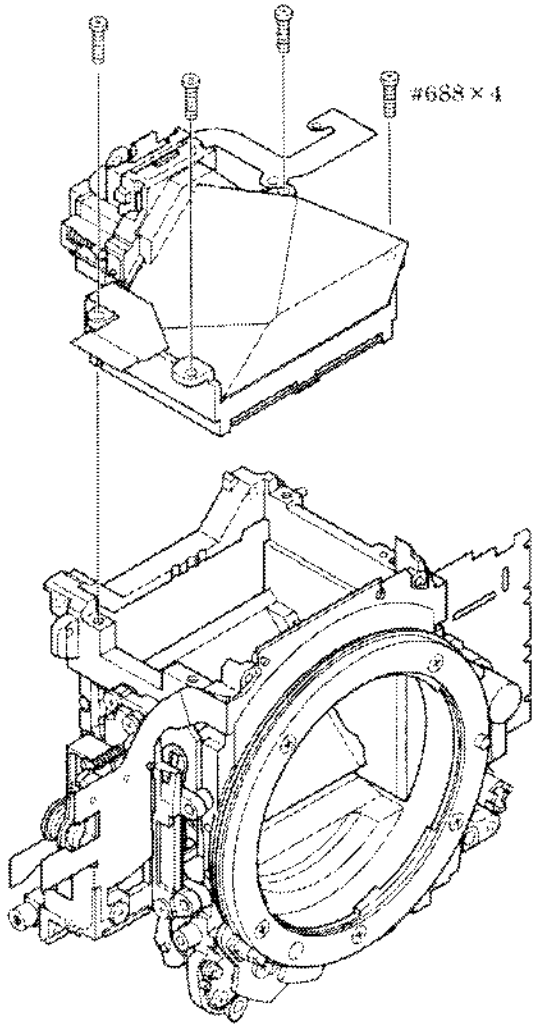
Notes) Since the prism of this camera is plastic hollow type, when cleaning inside the prism, blow inside the prism by using the brower.



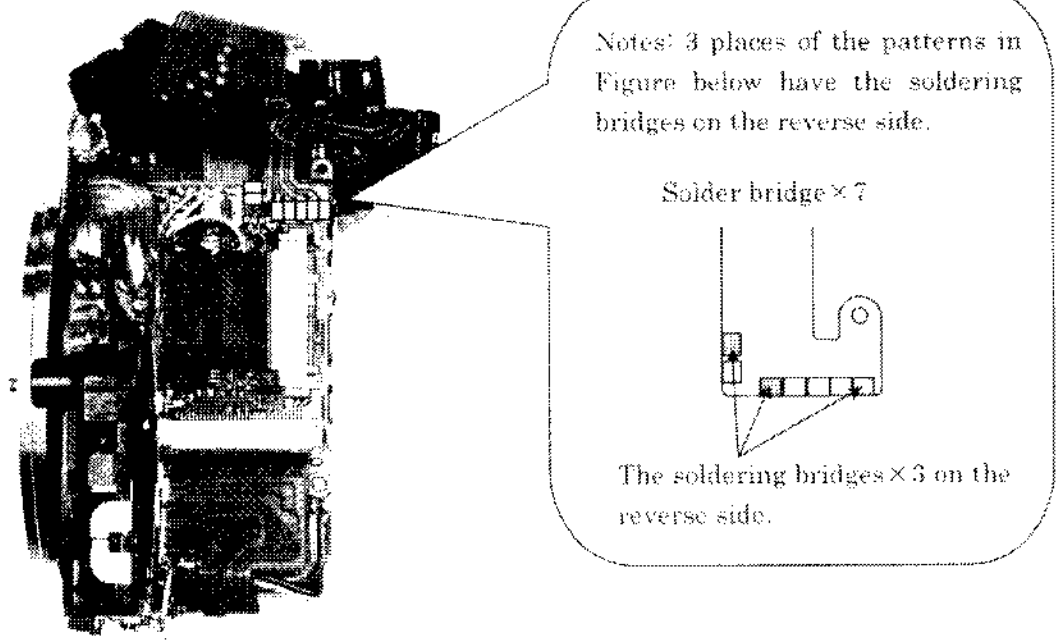
Notes) Please note that the shield plate is easily removed from the 2 pieces of the hooks when assembling the eye piece barrel unit to the pentagonal box or removing the eyepiece frame B271 (Refer to page A25).

サービス計画課 M

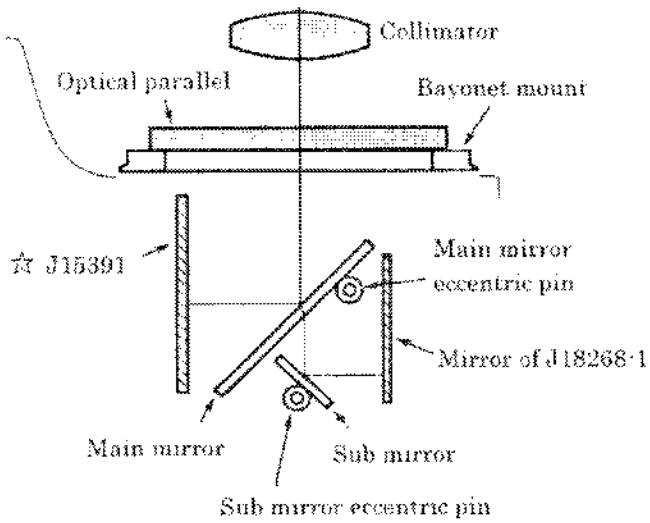
2. Mount prism box on front body



3. Soldering bridges on the metering FPC



ANGLE ADJUSTMENT OF MAIN MIRROR AND SUB MIRROR TO 45°



*Use tools

1. Angle adjustment of main mirror
   ①Collimator (J19002)
   ②Mirror angle inspection mirror ☆ (J15391)
   ③Optical parallel (J18037)
   ④Hexagonal wrench
2. Angle adjustment of sub mirror
   ①Collimator (J19002)
   ②Sub mirror angle adjustment tool (J18268-1)
   ③Hexagonal Wrench

☆ : NEW TOOL

- Angle adjustment of main mirror to 45°

  Note : Check to confirm the accuracy of the main mirror before and after adjustment by moving it up and down several times.

  ①Checking the discrepancy (right/left)

  If horizontal displacement is out of the standard value, it is possible that bayonet spring #112 is pinched, mirror unit B2231 is defective, or mirror shaft is bent.

  ②Checking the discrepancy (up/down)

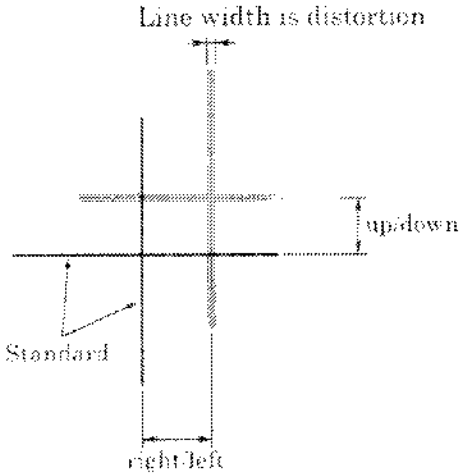
  If the amount of the discrepancy is out of the standard value, rotate the main mirror eccentric pin to adjust.

- Angle adjustment of sub mirror to 45° (47.75°)

  Note : Check to confirm the accuracy of the main mirror before and after adjustment by moving it up and down several times.

  ①Checking the discrepancy (up/down)

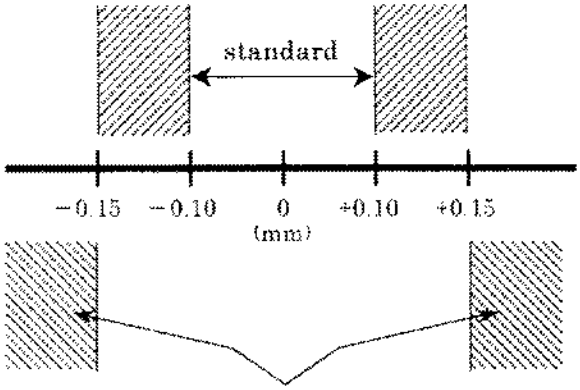
  If the amount of the discrepancy is out of the standard value, rotate the sub mirror eccentric pin to adjust.



Standard :

	Main mirror	Sub mirror
Discrepancy (right/left)	Within ±25'	
Discrepancy (up/down)	Within ±5'	Within ±5'
Distortion	Within ±8'	Within ±8'

ADJUSTMENT OF INFINITY (∞)



Check for the deformation of the front body or Prism box.

⚠(Addition)

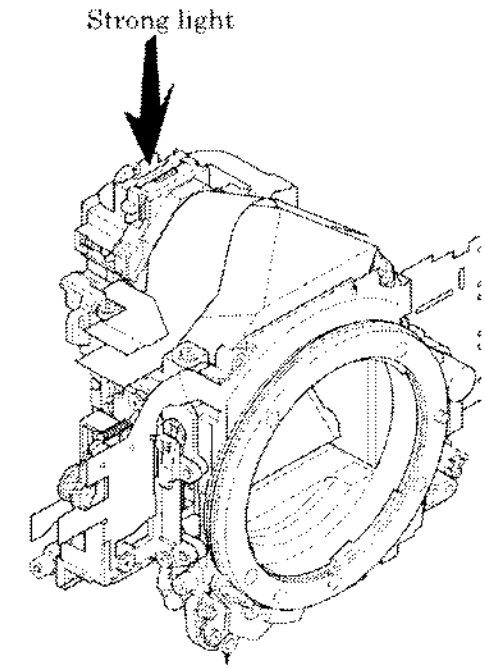
- Replace the finder screen to the infinity focus check screen J15394 and then set the reference lens J18010 and read the value.

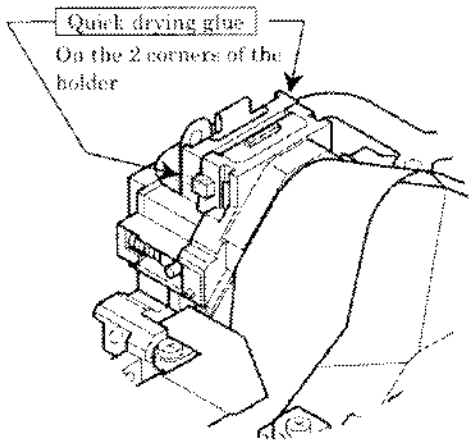
  - In the case of -0.10~+0.10
    As it is within the standard range, adjustment is not required.

  - In the case of -0.15~0.10 or +0.10~+0.15
    Replace the G3 washer #297.

  - In the case of -0.15 or less or +0.15 or more
    Check for the deformation of the front body or Prism box.

AE SPD POSITION ADJUSTMENT

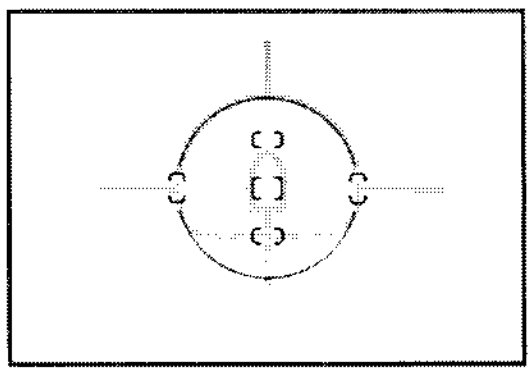




① Shade the eyepiece and Mirror box using a black tape.

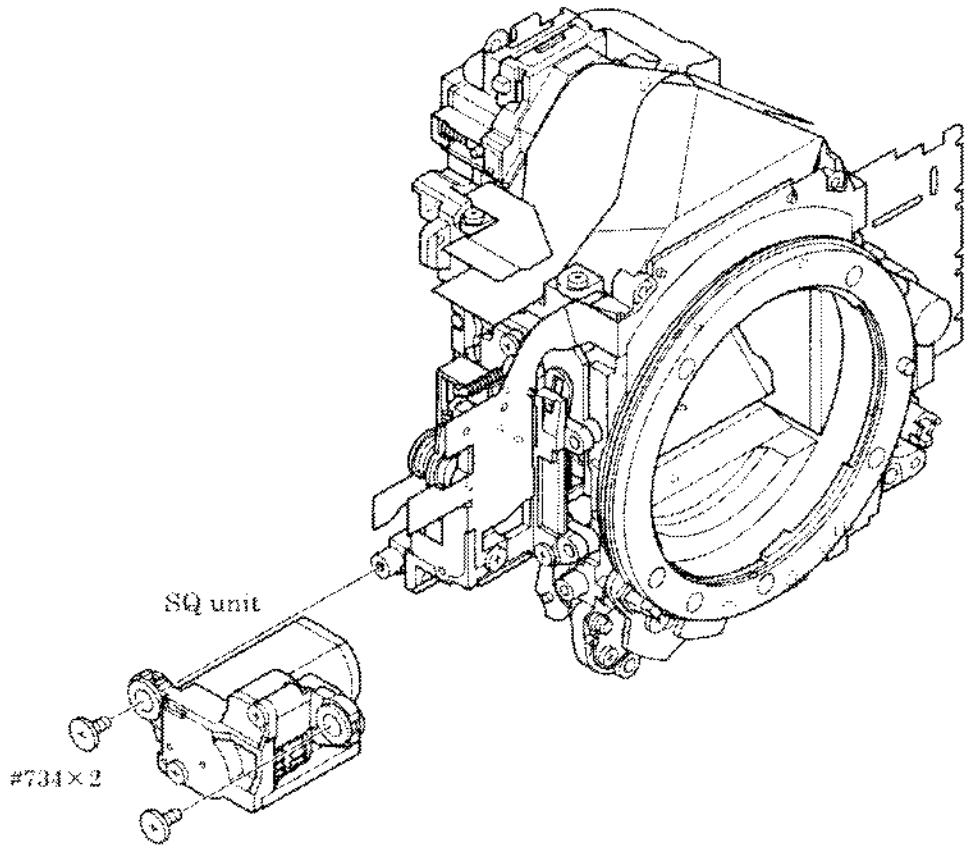
② As shown in the left figure, project strong light from the top of the AE SPE so that the AE SPD pattern is reflected on the main mirror.

③ As shown the figure below, align the center of the AE SPD with both the focus frame and the φ12mm circle.
The AE SPD should be parallel to the main mirror.



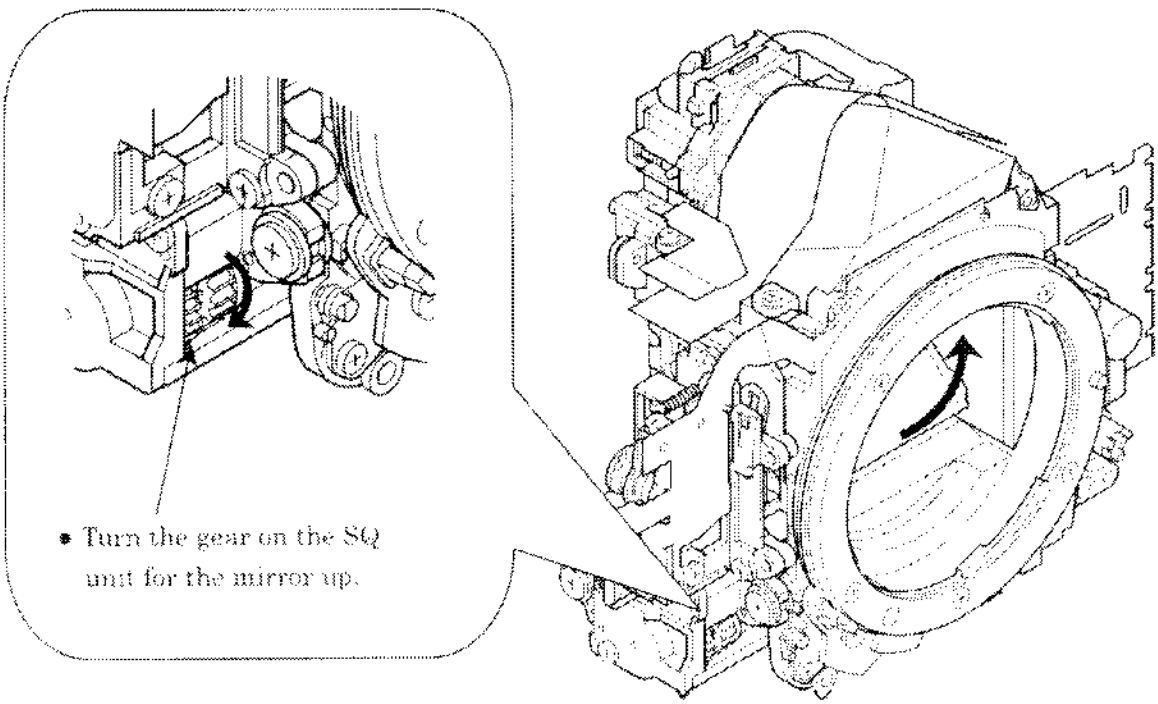
④ Fix the AE SPD holder on the prism box using Quick drying glue.

SQ UNIT

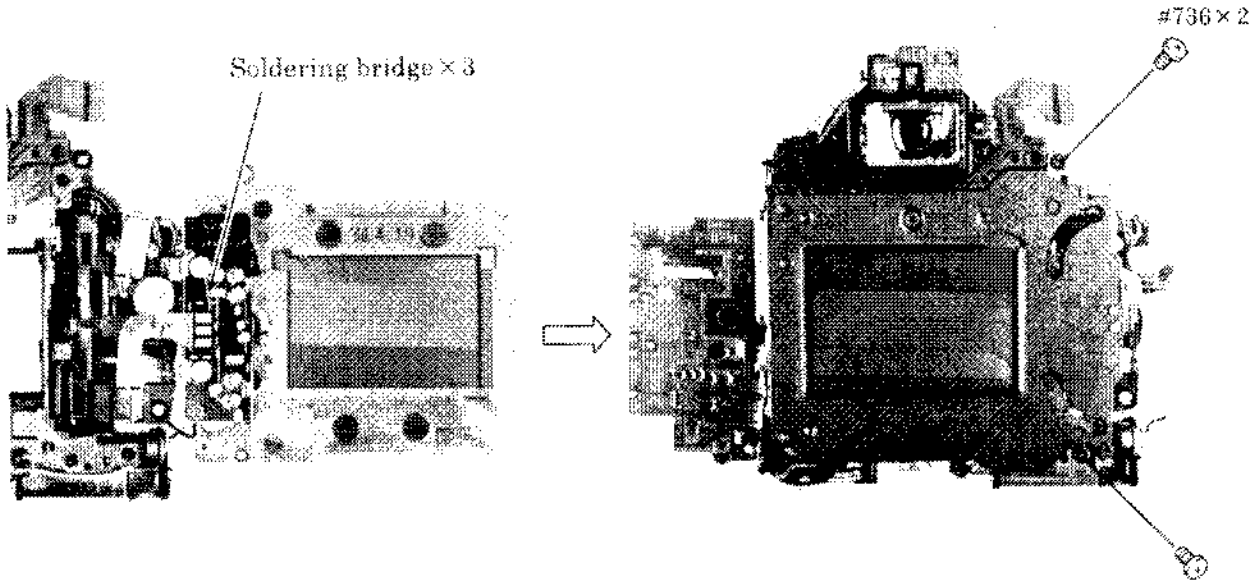


SHUTTER

1. Mirror up



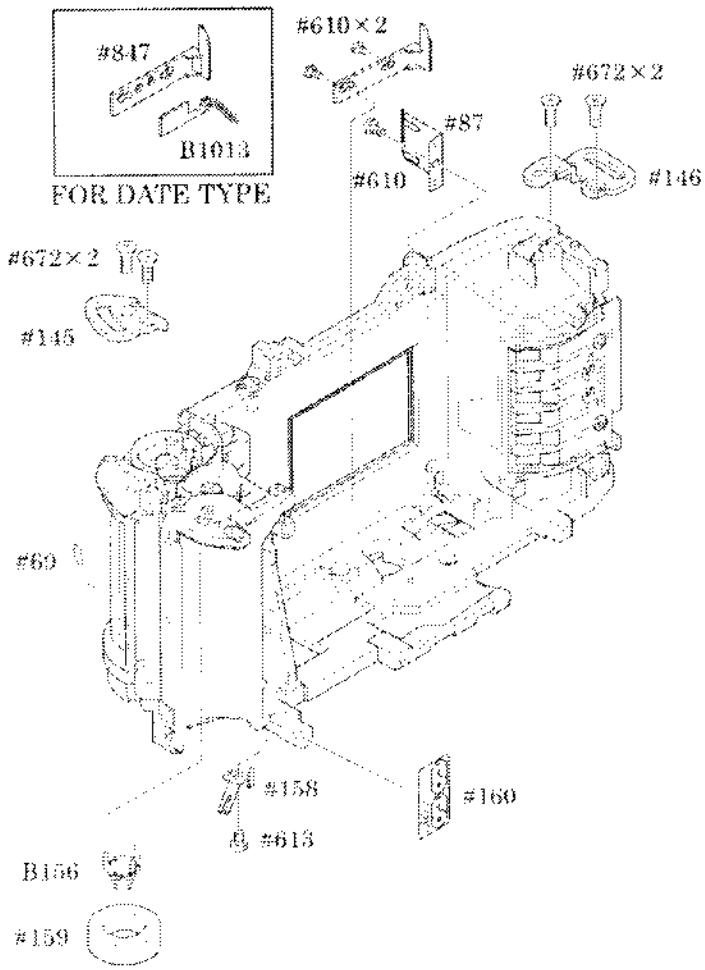
2. Mount the Shutter unit to Front body



• After attaching the shutter, rotate the SQ gear more and make the mirror down.

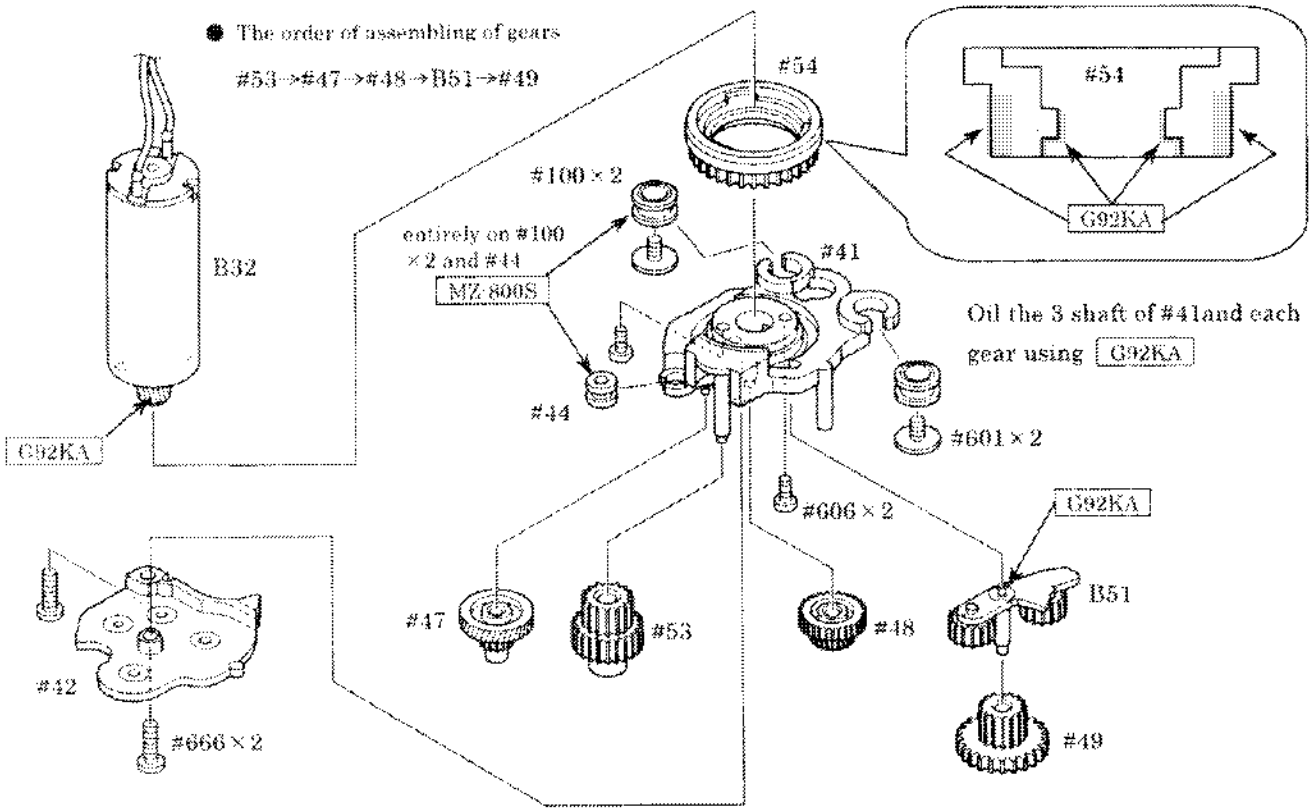
2. REAR BODY

SMALL PARTS OF REAR BODY

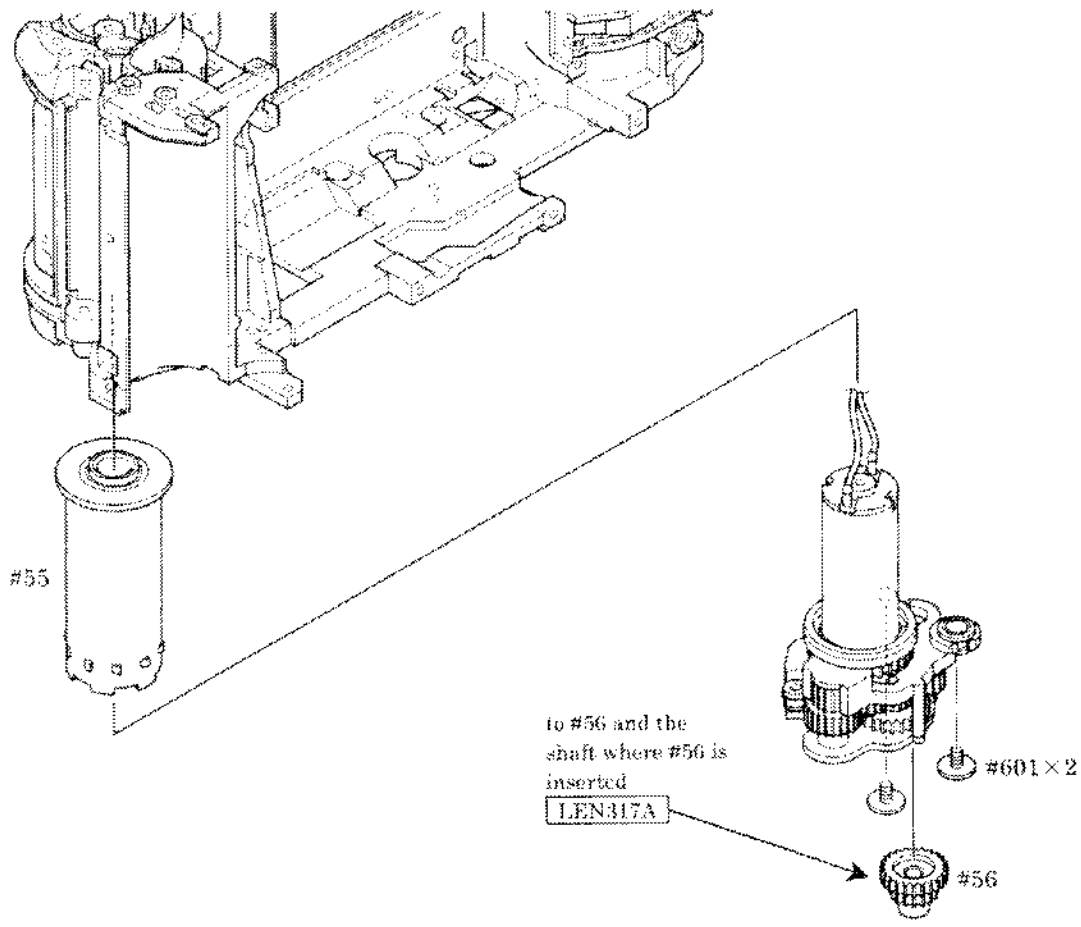


FILM ADVANCE UNIT

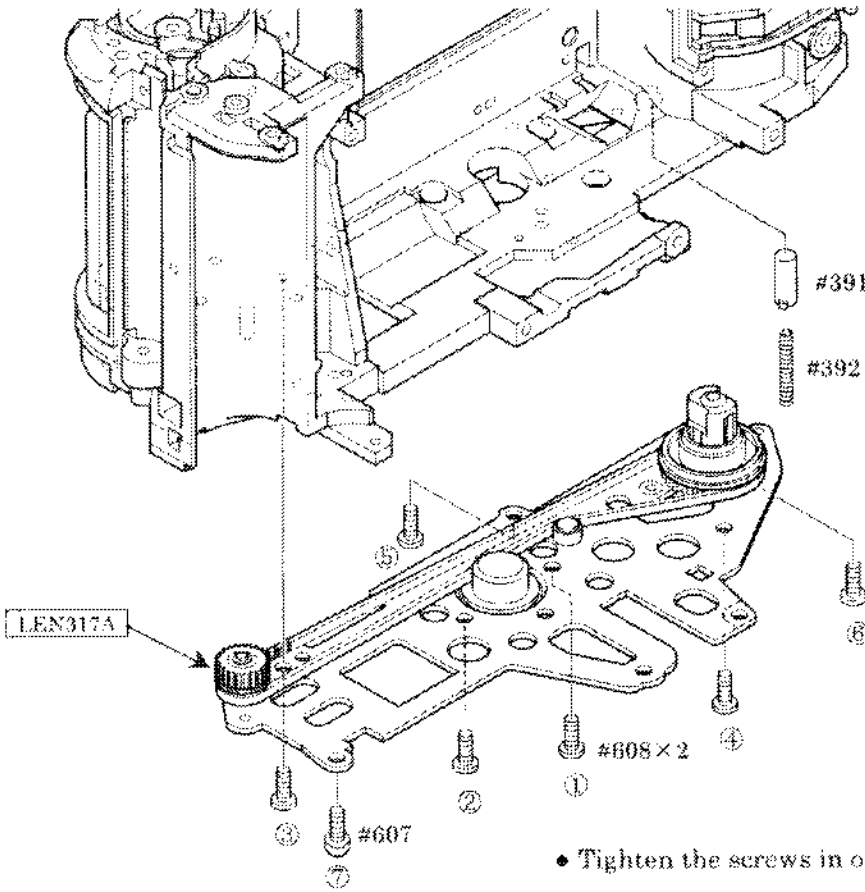
1. Assembling of each gear



2. Mount the Film Advance Unit to the Rear Body

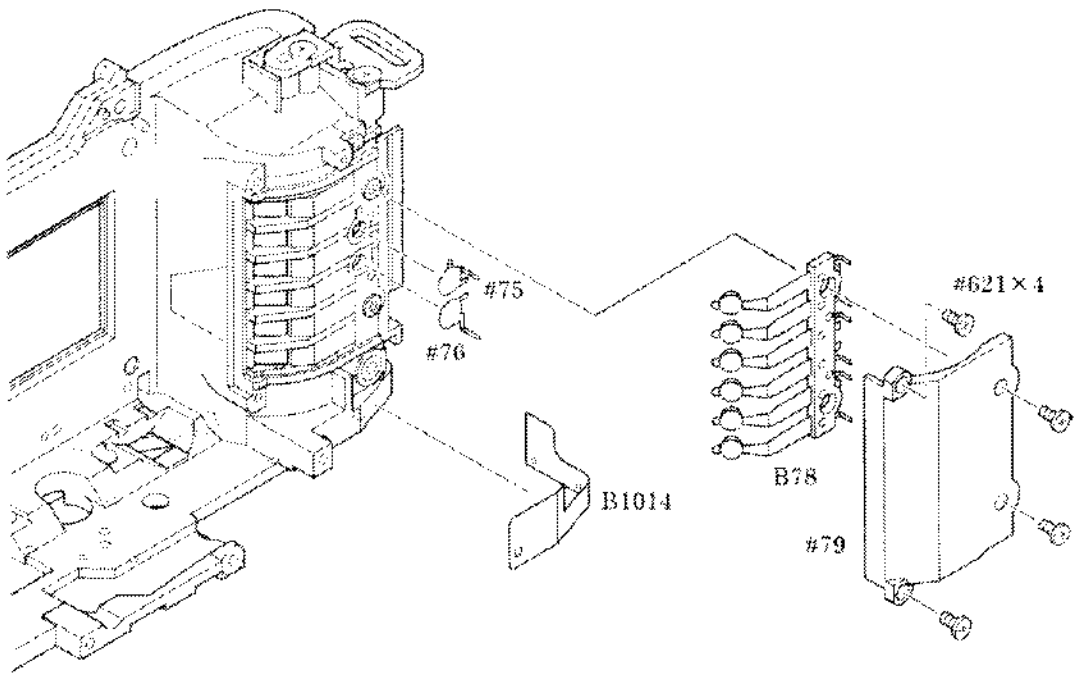


BOTTOM BASE PLATE

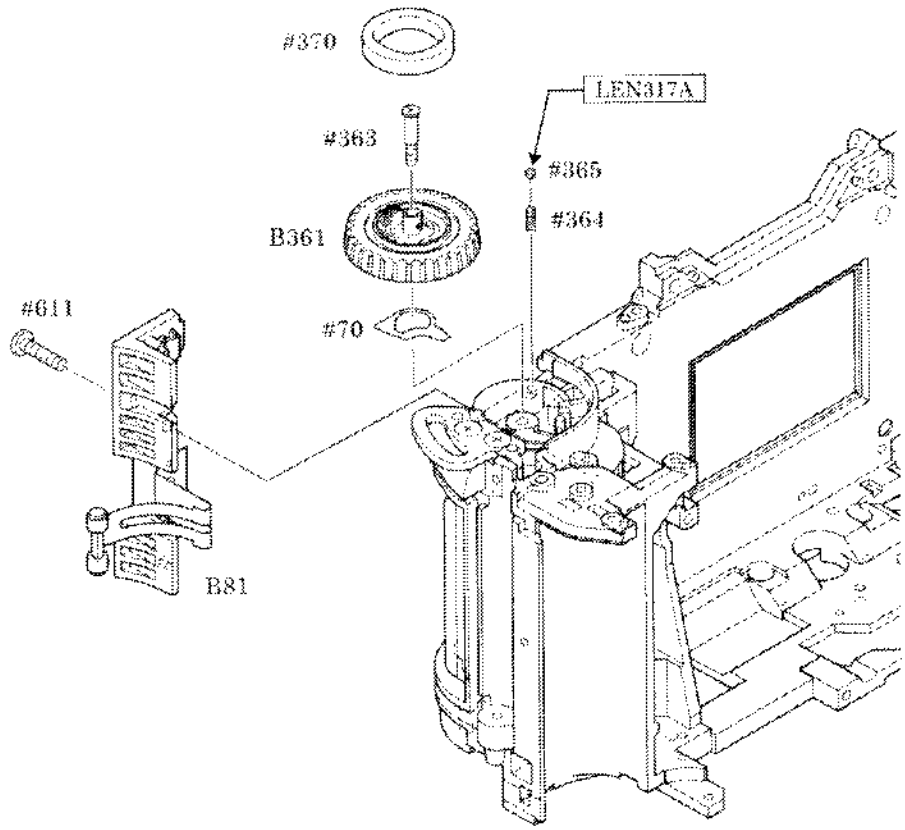


• Tighten the screws in order of ① to ⑦.

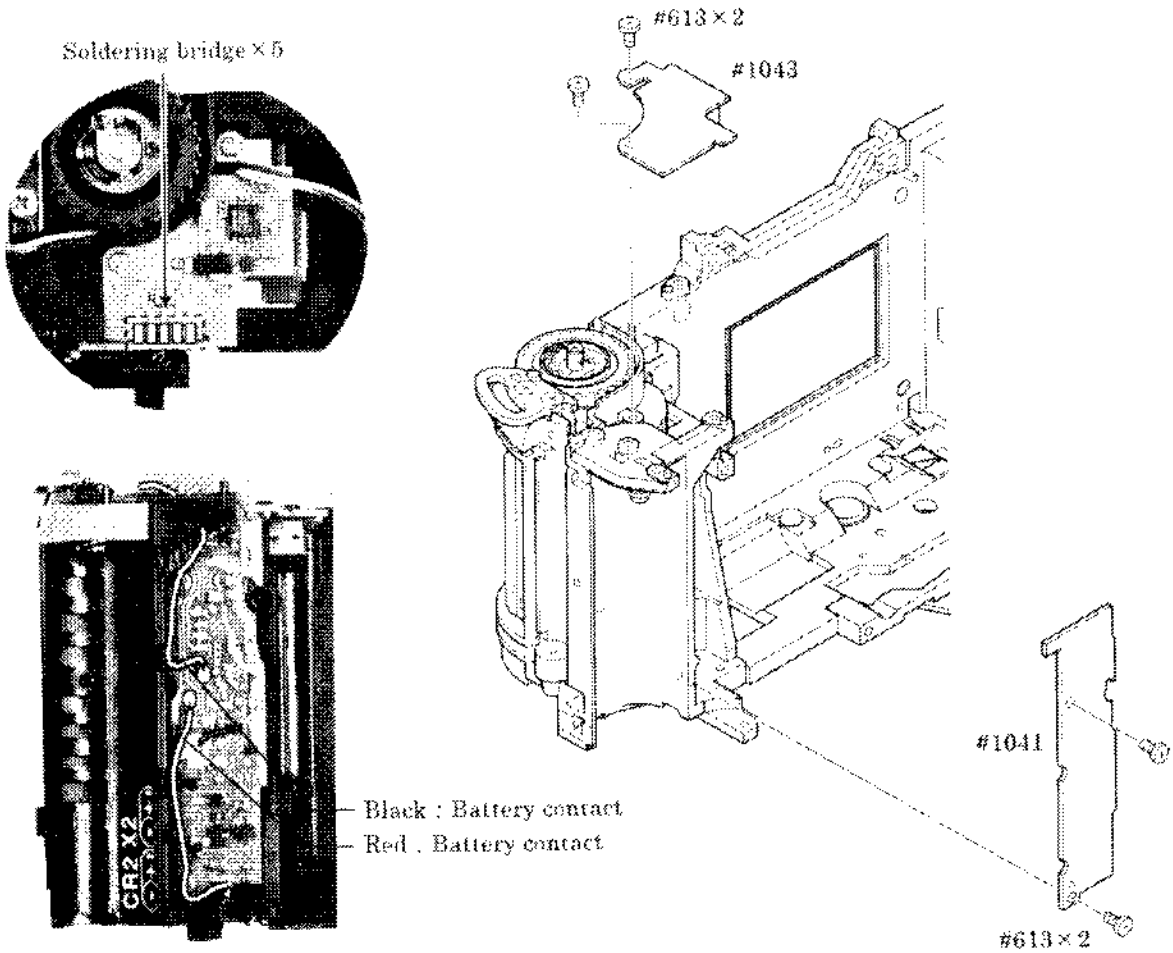
DX CONTACT



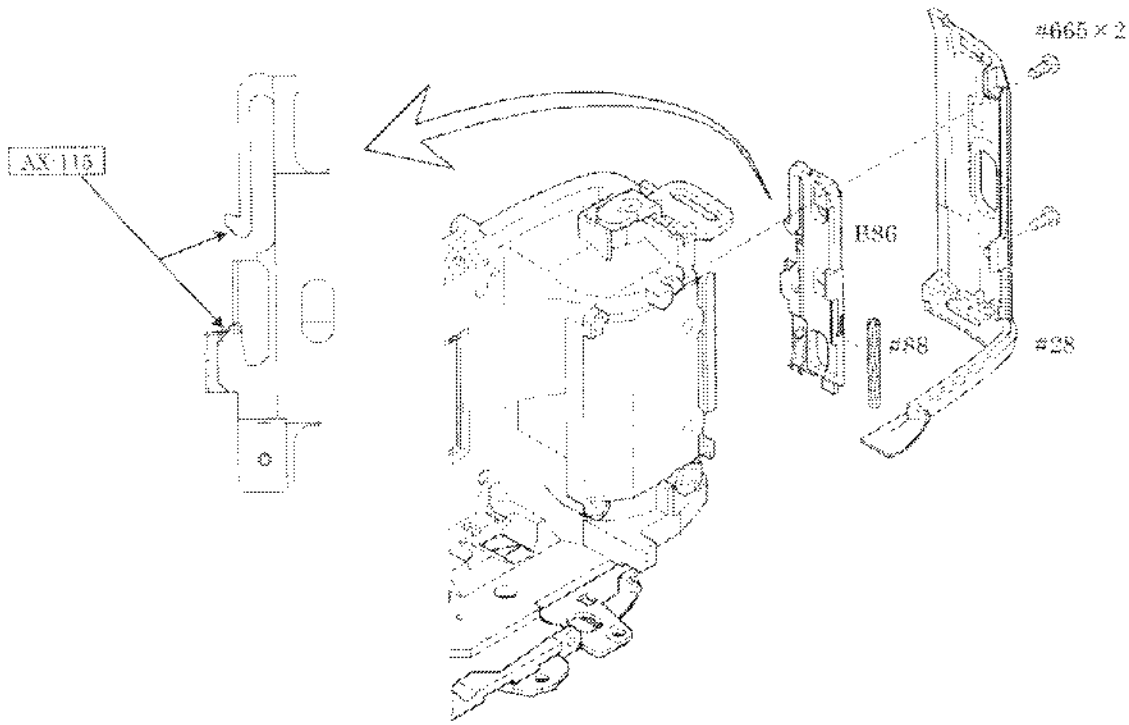
COMMAND DIAL, PR BASE PLATE UNIT



SB UNIT, DC/DC UNIT

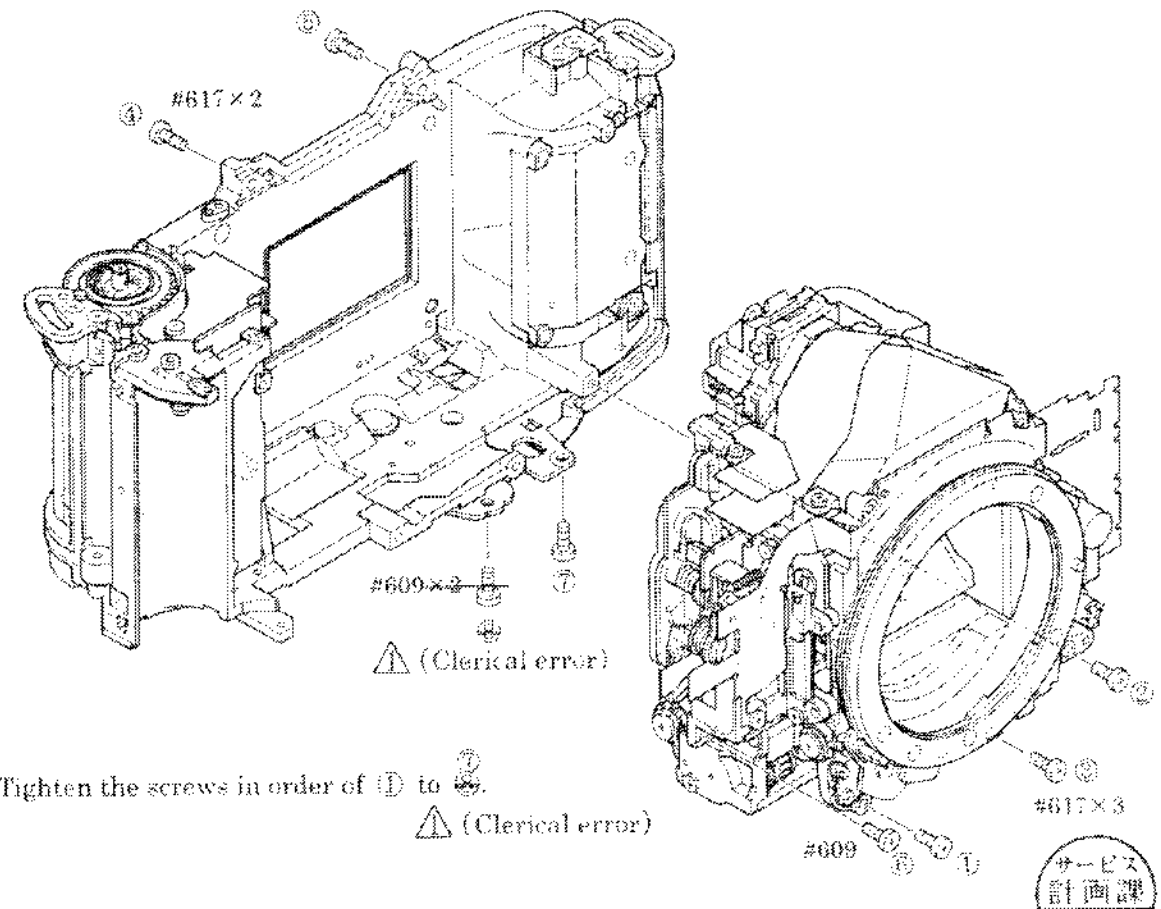


BACK DOOR OPEN/CLOSE AREA



3. MOUNTING BOTH THE FRONT AND THE REAR BODIES

MOUNT THE FRONT BODY TO THE REAR BODY



• Tighten the screws in order of ① to ⑦.

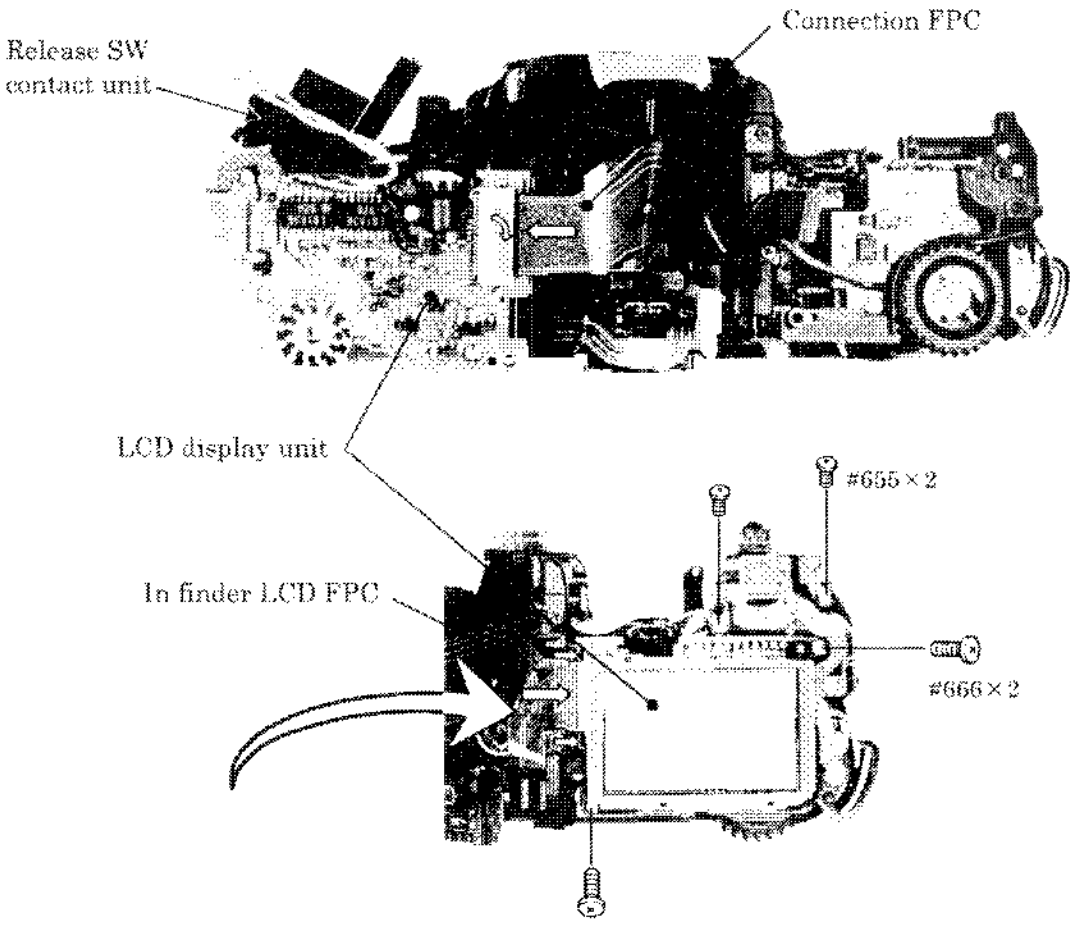
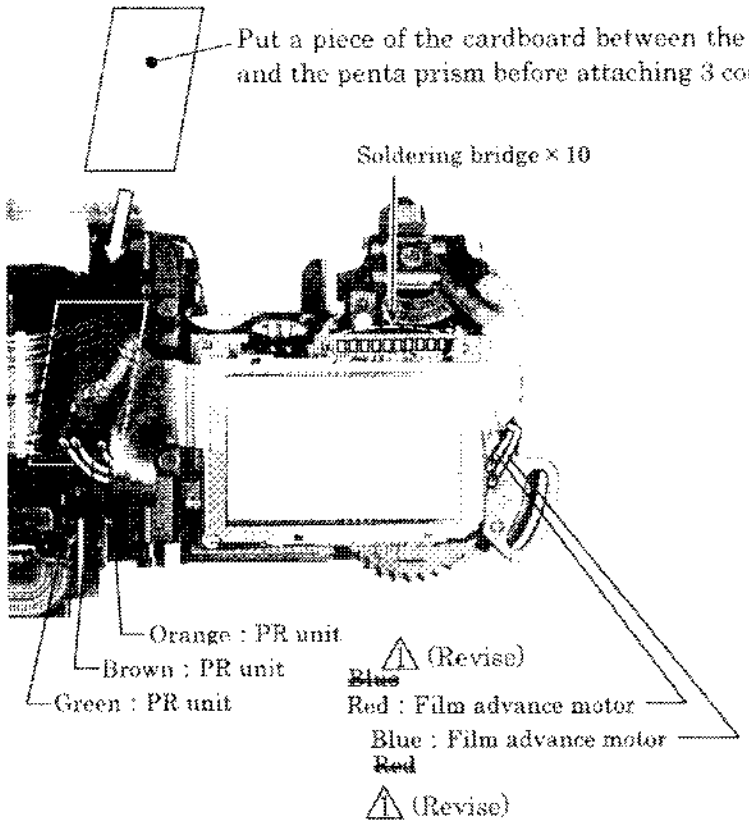
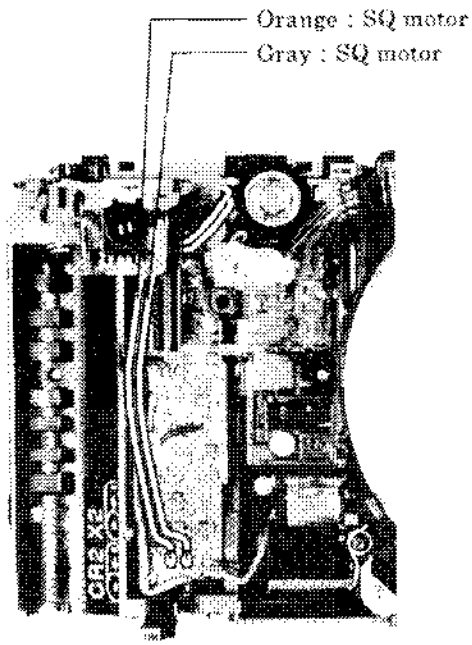
LCD DISPLAY UNIT

1. Connector, Mount of screw(s)



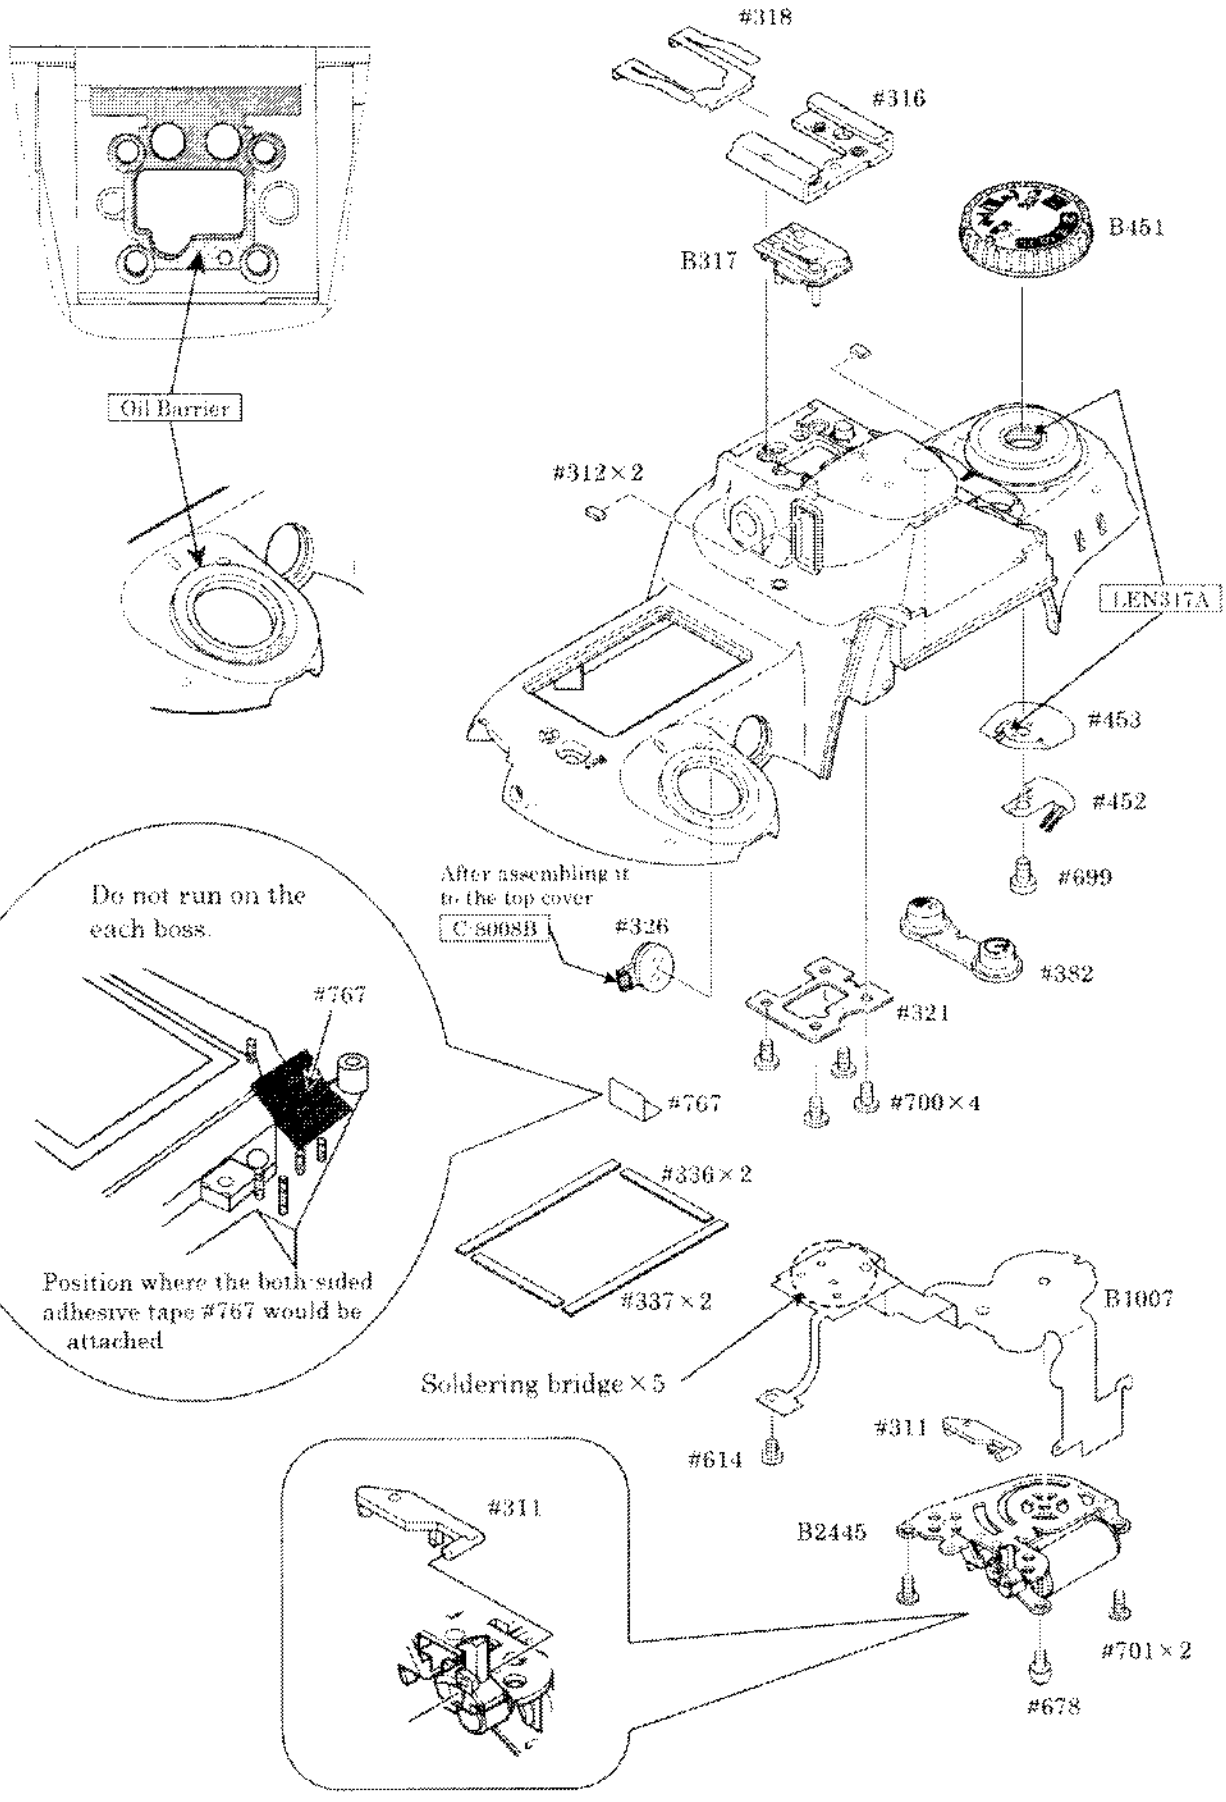
2. Connector, each wires



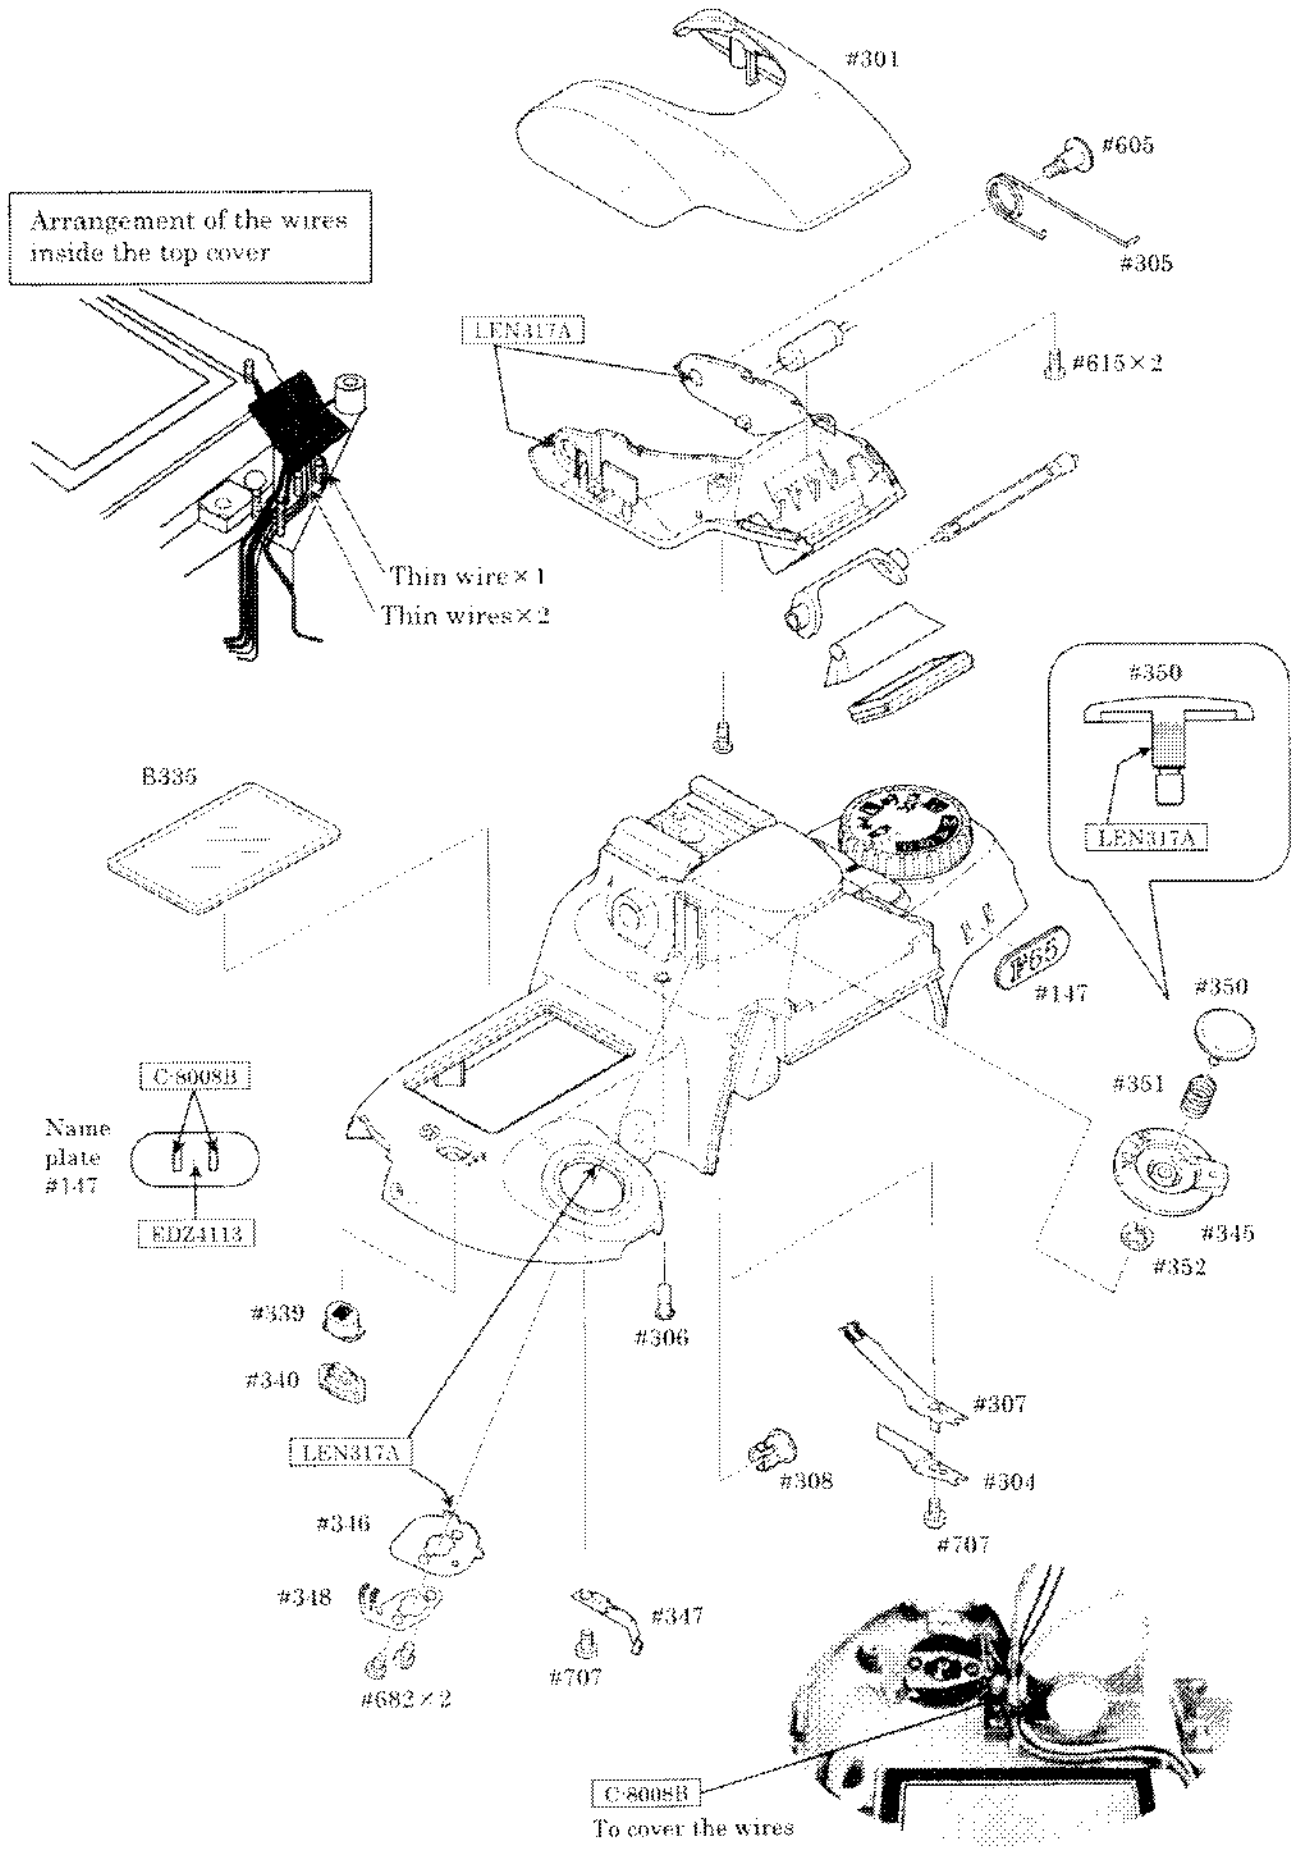


TOP COVER

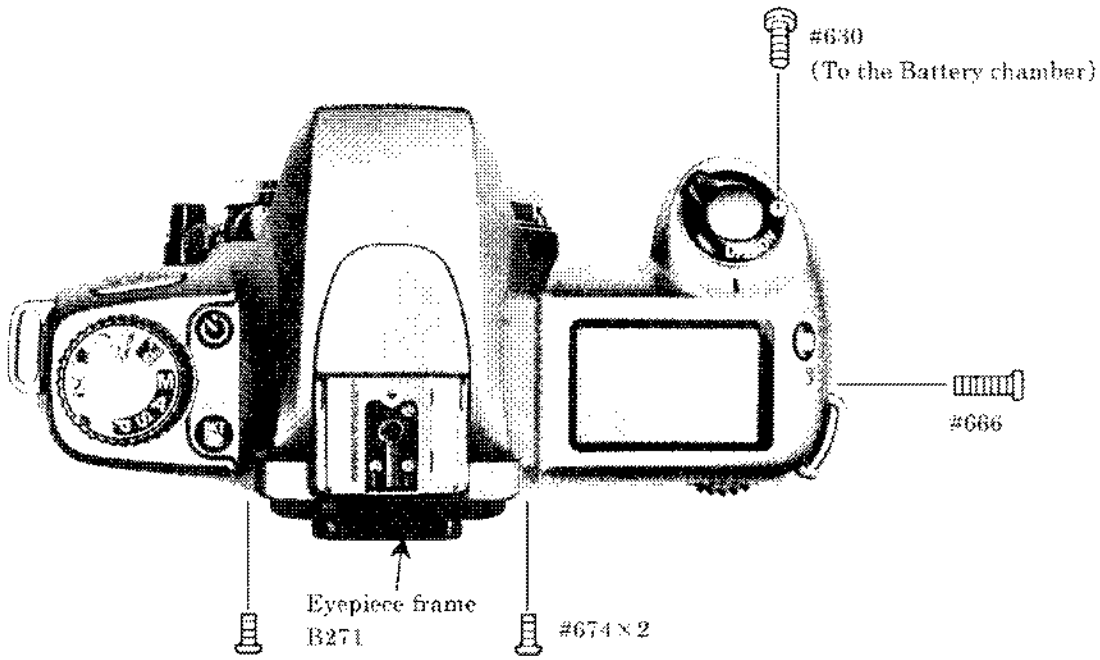
1 . Accessory shoe, Mode dial unit



2. SB area, Small parts



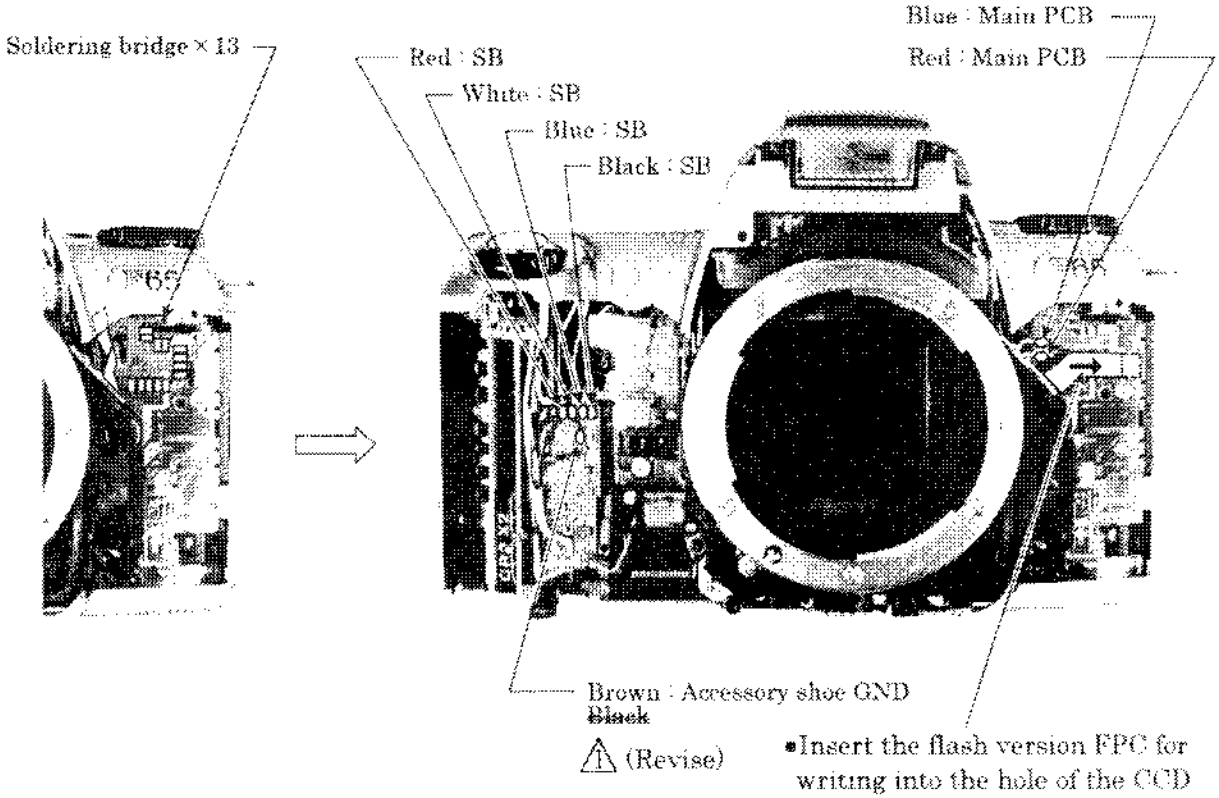
3. Mount the Top cover to the Body



- Attach the eyepiece frame B271, setting the diopter adjustment lever to "-" side (lowest position) and passing the frame under the movable lens lever.

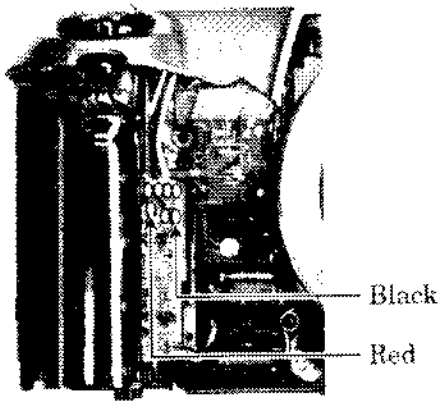
Check : After the eyepiece frame is attached, slide the diopter adjustment lever and check the diopter correction lens performance.

4. Each wires, Soldering bridges

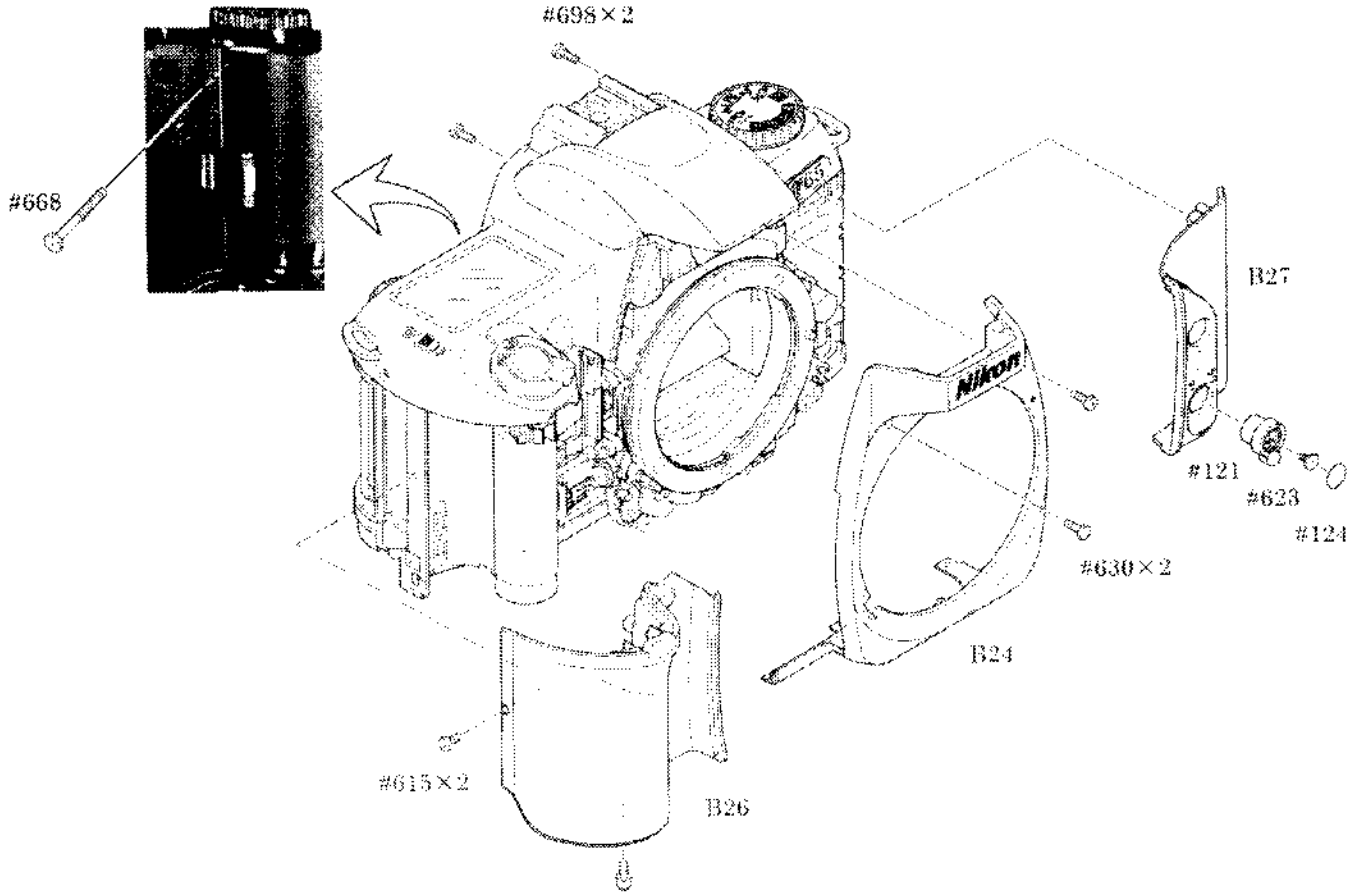


GRIP COVER, REWIND SIDE COVER, FRONT COVER

• Attachment of the main condenser

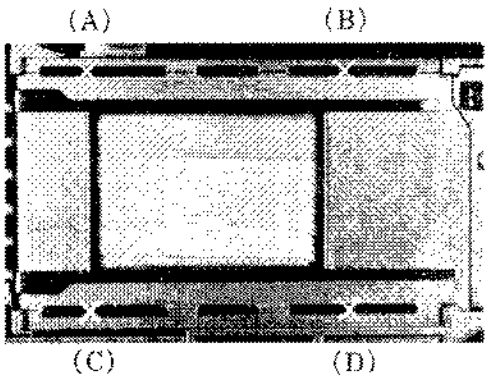


• In the last place, assemble the Front cover #24



INSPECTION & ADJUSTMENT OF BODY BACK

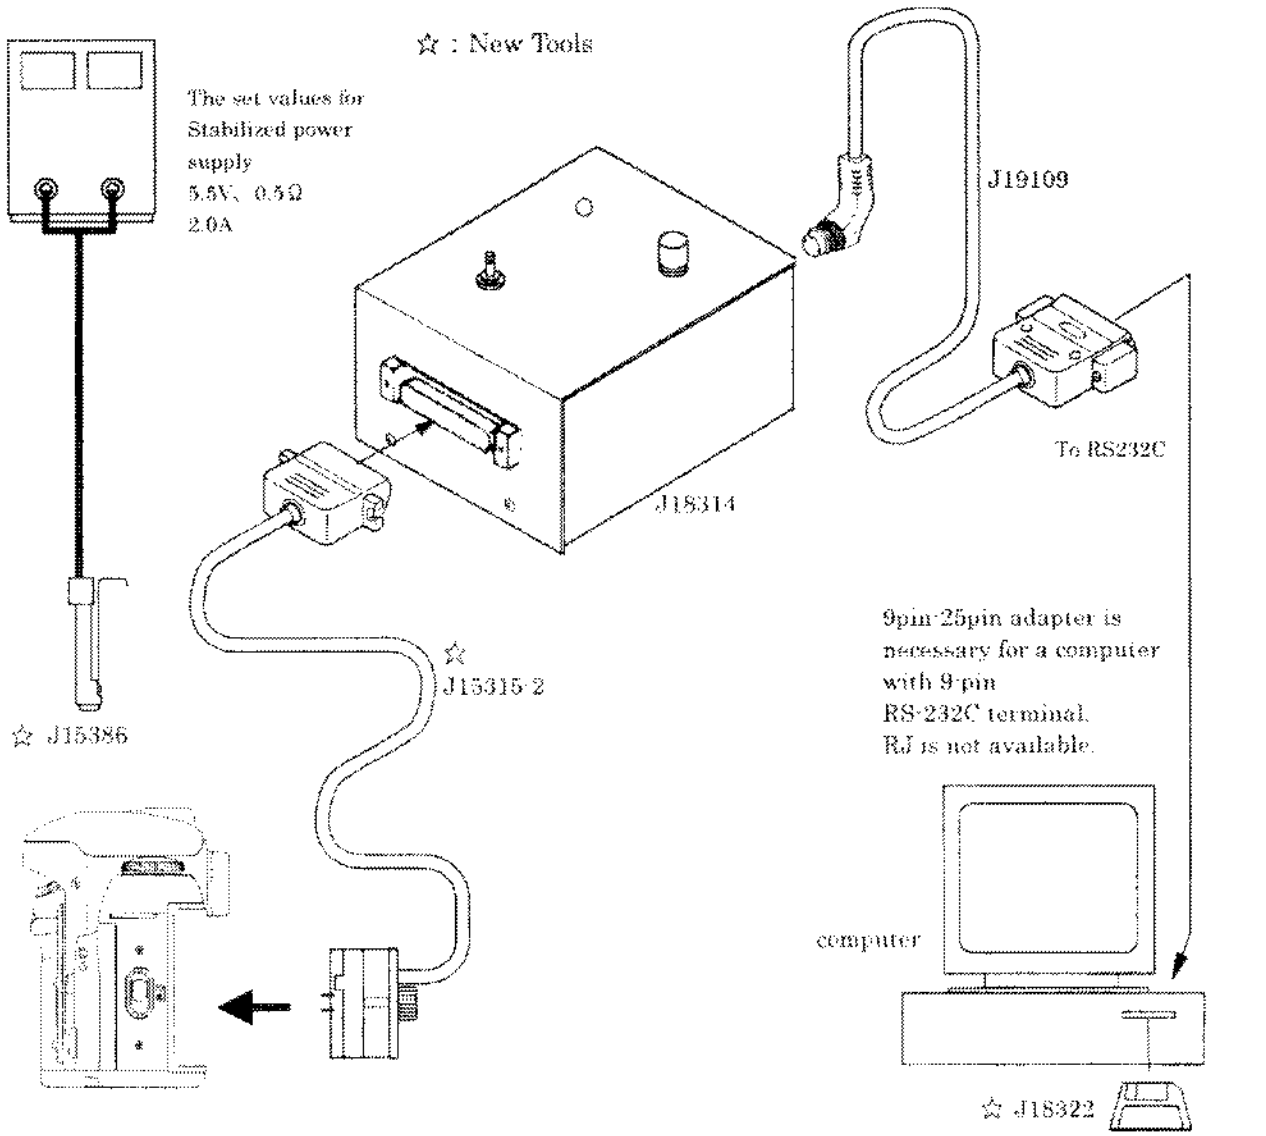
Notes) Take note (A) to (D) in order to use the difference from the standard 46.67mm at AF adjustment after inspection and adjustment.



- Measure from the bayonet surface to the external rail. The ×-marked positions are where to be measured.
  Standard : $46.67^{+0.03}_{-0.09}$ mm / Tolerance for flatness : within 0.06 mm

- If the measured value is out of the standard Value, unfasten bottom of screws #609 and #607 to move the front body back and forth.
  If it is within -0.05 mm, adjust it, placing the washer under the bayonet mount. If it is -0.06mm or more, adjust it placing the washer between the docking surface of front and rear bodies.

ADJUSTMENT THROUGH PC



Inspection and adjustment F10
For F65

Conduct each adjustment in accordance with the adjustment software instructions on PC screen.

1. AE adjustment
2. aperture adjustment
3. M1/ 2000 adjustment
4. TTL adjustment
5. Battery check adjustment

NOTE : Be sure to utilize either "F90" or " N90" oriented camera's shutter curtain.

Confirmation of the Battery check display mode

After adjusting the battery check, input below-mentioned each voltage data to the camera and then check the external LCD mode.

Note : Conduct the inspection by switching each voltage in order of No.1 to 5.

External LCD mode	Set up voltage from the stabilized power supply	
	① 5.35V	⑤ 5.65±0.2V
	② 4.75±0.2V	④ 5.05±0.2V
 blinks	③ 4.45±0.2V	

AF ADJUSTMENT

Notes) When using this adjustment software for the first time, prepare 5 units of F65 and measure them at the Adjustment for AF. Then, input the average value of the measured 5 units at "WRITING OF AF ADJ. LENS OFFSET VALUE " in the main menu.

〔Inspection and adjustment items〕

① Inspection and adjustment for the AF accuracy (whole item shall be adjusted)
② YAW, PITCH
③ LARK adjustment (include CCD output)
④ MBF adjustment

〔Tools in use〕

1. For adjustment of whole item:
   The tool(s) used for the AF-oriented adjustment shall be utilized.
2. For check of the AF accuracy
   ① Z adjustment lens (J18266) for F5、F100、F80

② AF adjustment stand (J13259)

③ Z lens holder (J15280) or position conversion adapter (J15271) for tripod socket

④ AF chart (J18237) for F5、F100、F80

⑤ Lighting box (J15264) for high frequency

3. For adjustment of YAW, and PITCH

① The whole tool used for the check of AF accuracy just as mentioned above

② Adjustment tool for YAW, and PITCH (J18230)

4. For adjustment of LARK (include CCD output adjustment)

The whole tool used for the check of AF accuracy just as mentioned above

AF50/1.4D lens

BACK DOOR, BOTTOM COVER

① Insert the back door from the bottom and attach it by the shaft×1

② Attach the bottom cover and fix it by the screw×8

Notes) Never use the solvent when cleaning the pressure plate, but use the A-level dust cleaning cloth or Savina Minimax and wipe it softly because the pressure plate of this camera is coated with the special paint.

INSPECTION CRITERIA and TOOLS

CONDITION FOR INSPECTION

Normal temperature : ２０±５℃　　Humidity : ６５±２０％
Power source : ５．５±０．０３Ｖ　５Ａ or more at ０．５Ω load
Light source : ２８５６° K
K coefficient : １．１６
Camera : Finished Product

INSPECTION CRITERIA

●When using the power supply, set the output to 5.5V with a resistance of 0.5Ω.

INSPECTION ITEM	CRITERIA	REMARKS
Shutter System		Exposure Mode: M.S
(1) Tolerance	1/2000～1/1500" : 0±0.45EV	Shutter tester (EF-8000)
	1/1500～30s : 0±0.3EV	
(2) Curtain Speed	6.9ms or less	21mm
(3) Dispersion	1/2000～1/180 : Within 0.45EV	
	1/180～30s : Within 0.3EV	
(4) Curtain Bound	There should be no curtain bound.	
AE Image Surface Exposure		Exposure Mode: P.A.S.
(1) Tolerance	1/2000～1/125 : ±0.65EV	Shutter tester (EF-8000)
	less than 1/125 : ±0.5EV	AF50/1.4
(2) Dispersion		
AE Diaphragm Control Accuracy	LV12 (ISO100)、1/125	Exposure Mode: S.
(1) Tolerance	From the maximum aperture to 4th stop aperture : ±0.5EV	Shutter tester (EF-8000)
	From F8 to the minimum aperture : ±0.65EV	AF50/1.8
(2) Dispersion	Within 0.5EV	
AF Adjustment Accuracy		Personal Computer and other
(1) Yaw	Center : 0±4mrad Side : 0±10mrad Upper/Lower : 0±10mrad	special tools
(2) Pitch	Center : 0±5mrad Side : 0±10mrad Upper/Lower : 0±10mrad	
(3) Lark	0±50μm	
Diaphragm Lever Height	3.4±0.1mm	J18004
Main Mirror 4 5°	Upper/Lower : ±10'	When it is stood up, there
(Collimator	Right/Left : ±30'	should be no gap. J19002・J15391
Measured Value)	Distortion : Within 8'	・J18037 Hex key Wrench
Sub-Mirror 4 7.7 5°	Upper/Lower : −5' +20'～−45'	J19002・J18268-1
	Distortion : Within 8'	Hex key Wrench
M. B. F	Outer Rail : $46.67^{+0.03}_{-0.09}$ mm Outer Rail Parallelism : Within 0.06mm Height Difference between Inner and Outer Rails : 0.21mm～0.25mm Aperture Surface Stage Difference of Inner Rail : 0.26mm or more	J18001 Dial Gauge
∞ (Infinity) Agreement	±100μm	J18010

INSPECTION ITEM	CRITERIA	REMARKS
Battery Check (1) First Level (2) Second Level	 Reducing Direction : 4.9±0.2V Returning Direction : 5.2±0.2V Reducing Direction : 4.6±0.2V Returning Direction : 4.9±0.2V	Power Supply
Image Plane Size (50/1.4 F5.6) Image Plane Position Frame Interval	Length : $24^{+0.4}_{-0.0}$mm／Width : $36^{+0.4}_{-0.0}$mm [H 1 − H 2]=±0.4mm or less  2±1.5mm	Calipers ISO100 Film
Consumption Current Items④and later, the values are products of consumption current and operating time	①Main Switch is OFF : 100μA or less ②Main Switch is ON and Half-Push Timer is OFF : 100μA or less ③Main Switch is ON and Half-Push Timer is ON : 150mA or less ④AF50/1.8 Lens is driven : 500mAsec or less (Operating Time : 1000ms or less) ⑤AF70-210/4-5.6 Lens is driven : 800mAsec or less (Operating Time : 2000ms or less) ⑥Preview is Operated : 120mAsec or less (Operating Time : 200ms or less) ⑦Empty Release : 250mAsec or less (Operating Time : 300ms or less) ⑧Empty Feeding : 500mAsec or less (Operating Time : 1000ms or less) ⑨Film Winding : 350mAsec or less (Operating Time : 420ms or less) ⑩Film Rewinding : 7000mAsec or less (Operating Time : 15s or less)	
Half-Push Timer Time	After Half-Push Switch OFF : Power should be turned OFF 5±1sec later. After Releasing : Power should be turned OFF 2±1sec later	
Half-Push Timer Time (When using the built-in and external speed light)	After Half-Push Switch OFF : Power should be turned OFF 5±1sec later. After Releasing : Power should be turned OFF 5±1sec later	
Bulb Battery Life	4 hours or more	
Brightness for AF Assist Light turned ON	Brightness for Light turned ON (50/1.8) : It should be turned ON and equivalent to EV5 or less	

INSPECTION ITEM	CRITERIA	REMARKS
Finder	Visuality Ratio : Vertical and Horizontal 89±3%	
	Parallax : Upper/Lower, Right/Left : Within 0.5mm	
	Eye Point : Distance from eyepiece (In the case of $-1.52m^{-1}$(dpt)) 15.87mm±10% (In the case of $+0.77m^{-1}$ (dpt)pt) 23.05mm±10%

2 . Modification of the old communication tool (J15315-1)

It is impossible to use the old communication tool (J15315-1) as it is because the film cartridge chamber of F65 is smaller than the former cameras.

Therefore, to make the F65 series cameras communicate with the PC, use the communication tool J15315-2 which is established newly this time or use the old communication tool after cutting off a part of the tool according to the dimension of the figure below.

The new communication tool J15315-2 and the modified old tool can be used for the former cameras F50, F60, F70 and F80 etc.

Notes) When processing the old communication tool (J15315), modify the tool to J15315-1 according to the F80 Repair Manual first, and then perform the following modification.

▒▒▒ : Cut off this part
